QUESTION 1

Your role of Systems Administrator at ABC.com includes the management of the company\\'s private cloud.

The private cloud is hosted on an internal System Center 2012 infrastructure.

The network includes servers that run Windows Server 2008 R2 Hyper-V and are managed by servers running System Center 2012 - Virtual Machine Manager (VMM).

You are configuring a hardware profile in VMM.

The hardware profile will be used to create virtual machines configured for Windows Network Load Balancing.

In the Network Adapter Properties, you configure the network adapter to be connected to a logical network and to use a Static IP address from the Static IP Pool.

You now need to configure the MAC address options.

Which two of the following options should you configure? (Choose two).

A. You should select the option for a Dynamic MAC Address.

B. You should select the option for a Static MAC Address.

C. You should tick the Enable Spoofing of MAC Addresses checkbox.

D. You should clear the Enable Spoofing of MAC Addresses checkbox.

Correct Answer: BC

In order for NLB service to function properly, it will assign all clustered NIC the same MAC address. It cannot do this if spoofing is disabled, so answer C is valid. Additionally, we want to make sure that once the MAC addresses are set by

NLB, they don\\'t change, this means answer B is valid.

http://technet.microsoft.com/en-us/library/bb742455.aspx http://blogs.technet.com/b/jhoward/archive/2009/05/21/new-in-hyper-v-windows-server- 2008-r2-part-2-macspoofing.aspx

(Since VMM is an abstraction to hyperv, we can assume hyperV NLB requirements are the same as VMM NLB requirements.)

QUESTION 2

You have a private cloud that is managed by System Center 2012. Your network contains two servers. The servers are configured as shown in the following table:

Server name	Server configurarition
VMM1	1 GB of RAM x64 architecture Windows Server 2008 Service Pack 2 (SP2) System Center Virtual Machine Manager (VMM) 2008 R2 Service Pack 1 (SP1)
SQL1	1 GB of RAM x64 architecture Windows Server 2008 Service Pack 2 (SP2) Microsoft SQL Server 2008 Express

Server1 stores its VMM databases on Server2.

You need to upgrade Server1 to VMM 2012.

What should you install before you upgrade VMM1? To answer, drag the appropriate component or components to the correct location or locations in the answer area. (Each component may be used

once, more than once, or Server name Server role not at all.)

Select and Place:

Correct Answer:

QUESTION 3

You plan to deploy System Center 2012 Virtual Machine Manager. The planned deployment must support the bare-metal deployment method. You need to identify the roles required for the planned deployment. What roles should you identify? (Each correct answer presents part of the solution. Choose two.)

A. Windows Deployment Services and DHCP Server

B. Windows Deployment Services and Network Policy and Access Services

C. Active Directory Domain Services and Active Directory Lightweight Directory Services

D. Active Directory Certificate Services and Active Directory Rights Management Services

E. Active Directory Domain Services and Domain Name Services (DNS)

Correct Answer: AE

QUESTION 4

You need to recommend which object must be monitored from Operations Manager to identify how the memory of VM1 is assigned. Which object should you include in the recommendation?

A. Memory

B. A Hyper-V Hypervisor Root Partition

C. A Hyper-V Hypervisor Partition

D. A Hyper-V VM Vid Partition

Correct Answer: D

QUESTION 5

You need to recommend a solution to remediate the Exchange Server 2010 service failures.

The solution must meet the technical requirements.

What should you include in the recommendation?

A. Create a service request workflow that triggers a dependent activity.

B. Create an incident event workflow that triggers a dependent activity.

C. Create an incident event workflow that triggers a runbook activity.

D. Create a service request workflow that triggers a runbook activity.

Correct Answer: C
