QUESTION 1

You need to implement the resiliency requirements for the Hyper-V hosts.

Which four cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Select and Place:

Cmdlets	Answer Area
New-VMSwitch	
New-NetLbfoTeam	
Connect-VMNetworkAdapter	
Add-VMNetworkAdapter	
Set-VMNetworkAdapterVlan	

Correct Answer:

Cmdlets	Answer Area
	New-NetLbfoTeam
	New-VMSwitch
	Connect-VMNetworkAdapter
Add-VMNetworkAdapter	Set-VMNetworkAdapterVlan

QUESTION 2

A company uses System Center 2012 R2 Virtual Machine Manager (VMM).

You have the following requirements: Self-service users must be able to store and share their resources.

Self-service users must be able to use the resources to create profiles and templates in VMM.

You need to configure VMM to support self-service users.

Which three actions should you perform?

Each correct response presents part of the solution.

- A. In the VMM library share, create a user data path.
- B. Grant the Read permission and the Write permission to all role members.
- C. In the Public Documents share, create a user data path.
- D. Assign the Deploy action to the role members.
- E. Grant the Read and execute permission to all role members.
- F. Assign the Author action to the role members.

Correct Answer: ABF

A (not C): VMM for System Center 2012 allows self-service users to use the VMM console, and to see their logical and physical resources in the Library workspace.

* Self-service user data paths Configure user data paths on self-service user roles to provide a place where members of a self-service user role can upload and share their own resources. The user data path also is the best place for

administrators to store resources that only members of a self-service user role need to use.

B: (not E) Access control permissions determine whether the users have Read/Write or Read/only access.

F (not D):

Author Grants members permission to author templates and profiles. Users with authoring rights can create hardware profiles, operating system profiles, application profiles, SQL Server profiles, virtual machine templates and service

templates. Deploy Grants members permission to deploy virtual machines and services from templates and virtual hard disks that are assigned to their user role. However, they do not have the right to author templates and profiles.

QUESTION 3

You need to recommend a solution to meet the private cloud services requirements for the marketing department users. What should you recommend deploying to the Toronto data center?

- A. The VMMSSP
- B. A virtual machine host that runs Windows Server 2012
- C. A VMM management server

D. A VMM library server

Correct Answer: D

QUESTION 4

You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains five virtualization hosts. You add new storage to the network. You need to discover the storage from the VMM Administrator Console.

What should you create first?

- A. a Hardware Profile
- B. a classification
- C. a Run As Account
- D. a Guest as Profile

Correct Answer: C

<http://technet.microsoft.com/en-us/library/gg610563>

QUESTION 5

You are the virtualization administrator for an organization. The organization uses all components of System Center 2012 R2 in the production environment. A power supply in a Hyper-v host server fails. The host server continues to run and host virtual machines in this degraded state.

You have the following requirements:

-Move virtual machines from host servers that are running in a degraded state to another host server.

-

Prevent placement of new virtual machines on degraded host servers.

You need to configure the environment.

Which System Center feature should you implement?

- A.
Dynamic Optimization
- B.
Performance and Resource Optimization (PRO)
- C.

Shared VHDX files

D.

Placement Rules

Correct Answer: B

<http://technet.microsoft.com/en-us/gg552992.aspx> What is Performance and Resource Optimization (PRO)? PRO helps ensure that virtual machine hosts and virtual machines are operating in the most efficient possible manner. PRO generates recommendations for remedial actions based on alerts that Operations Manager generates. You can configure PRO to implement the preconfigured corrective actions automatically.
