### QUESTION 1

You have three Windows Server 2012 R2 servers that are set up as a Hyper-V cluster. You use System Center 2012 R2 Virtual Machine Manager to manage the Hyper-V environment. Users report that when a Hyper-V host server becomes overloaded, the performance of the virtual machines is unacceptable. You need to analyze workloads and automatically migrate virtual machines from overloaded host servers to host clusters that have available capacity.

What should you configure?

- A. Performance and Resource Optimization (PRO)
- B. Placement Rules
- C. shared .vhdx file
- D. Dynamic Optimization

Correct Answer: D

<http://technet.microsoft.com/en-us/library/gg675109.aspx>

---

### QUESTION 2

You are the virtualization administrator for an organization. The organization uses all components of System Center 2012 R2 in the production environment. A power supply in a Hyper-v host server fails. The host server continues to run and host virtual machines in this degraded state.

You have the following requirements:

-Move virtual machines from host servers that are running in a degraded state to another host server.

-

Prevent placement of new virtual machines on degraded host servers.

You need to configure the environment.

Which System Center feature should you implement?

- A.  
Dynamic Optimization
- B.  
Performance and Resource Optimization (PRO)
- C.  
Shared VHDX files
- D.

Placement Rules

Correct Answer: B

<http://technet.microsoft.com/en-us/gg552992.aspx> What is Performance and Resource Optimization (PRO)? PRO helps ensure that virtual machine hosts and virtual machines are operating in the most efficient possible manner. PRO generates recommendations for remedial actions based on alerts that Operations Manager generates. You can configure PRO to implement the preconfigured corrective actions automatically.

---

### QUESTION 3

You need to implement the planned changes for the network technicians.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Create a Run As Account.
- B. Create a classification.
- C. Deploy System Center 2012 App Controller.
- D. Deploy the VMM console.
- E. Create a user role.

Correct Answer: AD

---

### QUESTION 4

You create a virtual machine template that has the following properties:

```

Status : Normal
JoinDomain :
JoinWorkgroup : WORKGROUP
ComputerName : *
AdminPasswordHasValue : True
OperatingSystem : Windows Server 2012 R2 Standard
CPUCount : 1
IsHighlyAvailable : True
IsDRProtectionRequired : False
RecoveryPointObjective :
SANCopyCapable : False
SANStatus : {TemplateVHDsNotPresentOnSANCopyCapableLuns (26150)}
Memory : 1024
QuotaPoint : 1
UndoDisksEnabled : False
CPUType : 3.60 GHz Xeon (2 MB L2 cache)
ShareSCSIBus : False
ObjectType : Template
Name : WS2012 R2 VM Template
Enabled : True
ComputerTierTemplate :
CapabilityProfile :
ApplicationProfile :
SQLProfile :
ServerFeatures : {Web-Server}
TotalVHDCapacity : 15032305536
VirtualizationPlatform : HyperV
DynamicMemoryMinimumMB : 512
Generation : 2
  
```

Use the drop-down menus to select the answer choice that completes each statement.

Hot Area:

### Answer Area

For Customer1 to use this template to deploy virtual machines, you must modify **[answer choice]**

▼

Generation.

ServerFeatures.

IsHighlyAvailable.

IsDRProtectionRequired.

For Customer2 to use this template to deploy virtual machines, you must modify **[answer choice]**

▼

Generation.

ServerFeatures.

IsHighlyAvailable.

IsDRProtectionRequired.

Correct Answer:

## Answer Area

For Customer1 to use this template to deploy virtual machines, you must modify **[answer choice]**

Generation.  
ServerFeatures.  
IsHighlyAvailable.  
IsDRProtectionRequired.

For Customer2 to use this template to deploy virtual machines, you must modify **[answer choice]**

Generation.  
ServerFeatures.  
IsHighlyAvailable.  
IsDRProtectionRequired.

## QUESTION 5

Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure.

From Operations Manager, you create a group named Group1.

You add multiple servers to Group1.

You have an Active Directory group named Group2.

You configure a dashboard for the users in Group2 to manage the client computers in Group1.

You need to ensure that the users in Group2 can achieve the following tasks:

View open critical alerts generated by Group1. Identify whether a monitor generated an alert.

Which object should you add to the dashboard?

- A. An alert view
- B. A state view
- C. An alert widget
- D. An event view
- E. A state widget

Correct Answer: C

Adding an alert widget to a dashboard

Step 1: In an empty dashboard cell, click on the "Click to add widget" link.

This opens the New Dashboard and Widget Wizard.

Step 2: Now you are presented with a selection of the available widgets.

Select Alert Widgets and then click Next.

Step 3: Once you give your widget a name and a description, you can choose a group or object for which to display alerts.

The ability to select between "Groups" and "Groups and objects" allows you to change the scope of objects for which you will receive alerts.

If you only want to target a certain object within a group or class, the "Groups and objects" option allows you to do so, while the "Groups" option enables you to view alerts for all objects within the group you choose.

Step 4: Next you can specify the criteria for the alerts you will receive. You may choose the Severity, Priority, and Resolution State of the alerts. For example, I will receive alerts for warnings and information of all priority, and in either the new

or closed state.

Step 5: Lastly, select the columns to display for each alert. You can also decide how the alerts are sorted by default as well as how they are grouped. One great addition to the alert widget that is not present in the alert view is the addition of

the "Is Monitor Alert" column.

This column allows you to see whether the alert was generated by monitor rather than a rule.

In my example, I will group alerts by "Is Monitor Alert" and sort by "Last Modified".

And there you have it.

We've configured a dashboard with a powerful alert widget. It is a great way to quickly view the alerts you care about organized in the way you want. If you aren't satisfied with your configuration or if your needs change, you can always click

the button which gives you the option to reconfigure, personalize, or remove your widget.

Reconfiguring a widget opens a wizard with your previously chosen widget configuration and allows you to change all of options to keep up to date with your needs.

Here you can change everything from the groups or objects targeted, to the name of the widget.

Personalizing a widget allows you to change the display options for that widget.

Here you can change which columns are displayed and how your alerts are grouped and sorted.

This allows you to view the alerts within a context that is most appropriate to you, but without having to worry about the primary configuration details. <http://blogs.technet.com/b/momteam/archive/2011/10/17/operations-manager-2012dashboards-thealertwidget.aspx>
