QUESTION 1

You need to recommend a solution to meet the monitoring requirements for App2.

What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. An aggregate rollup monitor
- B. A distributed application
- C. A dependency rollup monitor
- D. Service monitors

Correct Answer: B

QUESTION 2

You are implementing System Center 2012 R2.

You have four servers named Server1, Server2, Server3, and Server4 that run Windows Server 2012 R2. You install Operations Manager on Server1 and Data Protection Manager (DPM) on Server2.

You need to install the following System Center components:

A Service Manager data warehouse server

A Service Manager management server

Virtual Machine Manager (VMM)

App Controller

On which servers should you install each System Center component? To answer, select the appropriate component for each server in the answer area.

Hot Area:

Answer Area

Server1:
Service Manager data warehouse server
Service Manager management server
VMM

Server2:
App Controller
Service Manager data warehouse server
Service Manager management server

Server3:
App Controller
Service Manager data warehouse server
VMM

Server4:
App Controller
Service Manager management server
VMM

Correct Answer:

Answer Area

Server1:
Service Manager data warehouse server
Service Manager management server
VMM

Server2:
App Controller
Service Manager data warehouse server
Service Manager management server

Server3:
App Controller
Service Manager data warehouse server
VMM

Server4:
App Controller
Service Manager management server
VMM

QUESTION 3

You need to configure VMM 2012 to meet the private cloud services requirements for the human resources department users. What should you configure? (Each correct answer presents part of the solution. Choose all that apply.)

- A. A cloud
- B. A capability profile
- C. A user role
- D. A virtual machine template
- E. A service template

Correct Answer: ABCD

QUESTION 4

You need to recommend the method for installing VMM. The solution must meet the requirements for the planned private cloud infrastructure. What should you recommend?

- A. Implement two non-clustered Hyper-V hosts and install an instance of VMM on a virtual machine on each Hyper-V host.
- B. Install VMM as a highly available virtual machine on a Hyper-V failover cluster.
- C. Implement a Hyper-V NLB cluster and install an instance of VMM on each cluster.
- D. Install VMM as a clustered service on a Hyper-V failover cluster.

Correct Answer: D

QUESTION 5

You administer a Hyper-V environment that uses Windows Server 2012 R2 and System Center 2012 R2 Virtual Machine Manager (VMM). A line-of-business (LOB) application requires two virtual

machines (VMs). Each VM must have direct access to existing Fibre Channel storage.

You need to ensure that the two VMs have direct access to Fibre Channel storage.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Configure the Hyper-V host servers with one or more Fibre Channel host bus adapters (HBAs). Connect the Hyper-V host servers to the storage area network (SAN).

Configure each Hyper-V host server with at least one virtual storage area network (SAN). Add a Fibre Channel adapter to each VM.

Configure each Hyper-V host server with at least one Cluster Shared Volume (CSV).

Configure Storage Quality of Service (QoS) on each of the VMs.

Install a storage area network (SAN) that supports only N_Port ID Virtualization (NPIV).

Install a storage area network (SAN) that supports only Offloaded Data Transfer (ODX).

Correct Answer:

Configure each Hyper-V host server with at least one Cluster Shared Volume (CSV).

Configure Storage Quality of Service (QoS) on each of the VMs.

Install a storage area network (SAN) that supports only Offloaded Data Transfer (ODX).

Install a storage area network (SAN) that supports only N_Port ID Virtualization (NPIV).

Configure each Hyper-V host server with at least one virtual storage area network (SAN). Add a Fibre Channel adapter to each VM.

Configure the Hyper-V host servers with one or more Fibre Channel host bus adapters (HBAs). Connect the Hyper-V host servers to the storage area network (SAN).
