QUESTION 1

Your company plans to implement a monitoring solution for application licenses.

The corporate management policy states that all newly deployed technologies must be cloud-based.

You need to recommend a license monitoring solution that meets the management policy.

Which license monitoring solution should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

A. The Microsoft Asset Inventory Service (AIS)

B. Asset Intelligence in Microsoft System Center 2012 Configuration Manager

C. The Microsoft License Statement tool

D. The Microsoft Assessment and Planning (MAP) Toolkit

Correct Answer: A

QUESTION 2

You need to recommend a solution to update App4 on the client computers that already have the application deployed. The solution must meet the application requirements. What should you include in the recommendation?

A. Add a package to the software installation settings of a Group Policy object (GPO).

B. Use Import Updates from the Update Services console.

C. Run wsusutil.exe and specify the import parameter.

D. Run a script that uses the WSUS Application Programming Interface (API) for local publishing.

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2008 R2.

You install Microsoft System Center 2012 Configuration Manager on Server1.

You need to ensure that you can perform bare metal installations of Windows 8 over the network.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

A. From Server Manager on Server2, install the Application Server server role.

B. From the Configuration Manager console, add Server2 as a distribution point.

C. From Server Manager on Server2, install the Windows Internal Database feature.

D. From the Configuration Manager console, enable PXE support for clients.

E. From Active Directory Users and Computers, configure the delegation settings of the Server2 computer account.

F. From Active Directory Users and Computers, configure the delegation settings of the Server1 computer account.

Correct Answer: AB

QUESTION 4

Your company has three offices named Office1, Office2, and Main1. The offices do not have a network connection to each other. The offices are configured as shown in the following table.

Office	Configuration
Main1	Contains client computers, servers, and domain controllers.
Office1	Contains only client computers.
Office2	Contains client computers and servers. All servers are members of a workgroup.

www.Lead4Pass.com

You plan to deploy Microsoft Application Visualization (App-V) 5.0 to the network. Only Mainl requires App-V streaming.

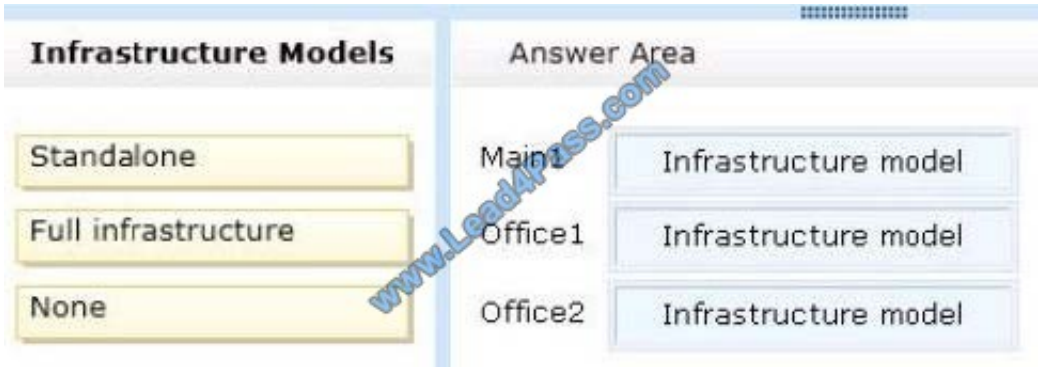
You need to identify the appropriate App-V infrastructure model for each office.

Which infrastructure model should you identify?

To answer, drag the appropriate infrastructure model to the correct requirement in the answer area. Each infrastructure model may be used once, more than once, or not at all.

Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:



Correct Answer:

Main1: Full Infrastructure

The Full Infrastructure Model provides for built-in software distribution, management, and reporting capabilities; it also includes the streaming of applications.

Office1: Standalone

The Standalone Model allows virtual applications to be Windows Installer-enabled for distribution without streaming.

Office2: Standalone

The Standalone Model allows virtual applications to be Windows Installer-enabled for distribution without streaming.

Note:

* The three models for distribution are:

1)Standalone Model. The Standalone Model allows virtual applications to be Windows Installer-enabled for distribution without streaming.

2)Streaming Model. The Streaming Model offers application streaming without requiring Active Directory or a database; it enables administrators to stream from existing servers or via System Center Configuration Manager 2007 SP1 with R2

distribution points.

3)Full Infrastructure Model. The Full Infrastructure Model provides for built-in software distribution, management, and reporting capabilities; it also includes the streaming of applications.

All models require a Microsoft Application Virtualization client to be installed on the workstation or RD Session Host server. More details on each of the options are given below.

* The following roles, while required, are not covered in detail since they have no significant infrastructure architecture discussion requirements:

- Active Directory Domain Services, for user authentication and application security management.

- A client or server running the Microsoft Application Virtualization Management Console.

- A sequencer for creating the virtualized application packages. Since the application packages can be shared between instances, not all instances require a sequencer.

- App-V client installed on systems that require application virtualization: desktops, virtual machines (VMs), or RD Session Host servers.

QUESTION 5

Your network contains an Active Directory domain named contoso.com.

You plan to implement Encrypting File System (EFS) to encrypt data on the client computer of each user.

You need to prevent EFS from generating self-signed certificates.

What should you use in Group Policy Management Editor?

To answer, select the appropriate Group Policy setting in the answer area.
