-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012. Server1 has the Active Directory Certificate Services server role installed and is configured as an enterprise root certification authority (CA).

You plan to implement Encrypting File System (EFS) on all client computers.

Users use different client computers.

You need to prevent the users from receiving a different EFS certificate on each client computer.

What should you implement?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Credential roaming
- B. Roaming user profiles
- C. PFX files on an external USB disk
- D. Folder Redirection

Correct Answer: A

You must enable Credential roaming so that whatever machine a user logs on to, their credentials follow them.

This may use up extensive space in Active Directory. A certificate is enrolled to a computer where a user is logged on interactively. With credential roaming, the certificate and also the corresponding key pair are uploaded into the user's object

in Active Directory about 10 seconds after certificate enrollment. If the domain consists of multiple domain controllers, Active Directory replication will make the updated user object available to all other domain controllers within the domain. If

the same user who was previously enrolled for a certificate logs on to a different computer or terminal server session, credential roaming will synchronize the user's local certificate store with the certificates that are stored in Active Directory.

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains multiple servers that are configured as Hyper-V hosts. You plan to implement four virtual machines. The virtual machines will be configured as shown in the following table.

You need to identify which network must be added to each virtual machine. Which network types should you identify? To answer, drag the appropriate Network Type to the correct virtual machine in the answer area. Each Network Type may

be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Network Types	Answer Area
Private	VM1 Network
Internal	VM2 Network
External	VM3 Network
	VM4 Network

Correct Answer:

Network Types	Answer Area
Private	VM1 External
Internal	VM2 External
External	VM3 Private
	VM4 Internal

An external network, which provides communication between a virtual machine and a physical network by creating an association to a physical network adapter on the virtualization server. An internal network, which provides communication between the virtualization server and virtual machines. A private network, which provides communication between virtual machines only. <http://technet.microsoft.com/en-us/library/cc732470%28v=WS.10%29.aspx>

QUESTION 3

You need to update the Windows 8 image. The solution must meet the application requirements. What should you do first?

- A. Run dism and specify the /export-defaultappassociations switch.
- B. Run dism and specify the /removeprovisionedappxpackage switch.

- C. Run dism and specify the /remove-package switch.
- D. Run dism and specify the /check-apppatch switch.

Correct Answer: B

QUESTION 4

Your network contains a Virtual Desktop Infrastructure (VDI). All users access applications by using their virtual desktop. All virtual desktops run Windows 8. You have a test environment that contains four computers. The computers are configured as shown in the following table.

Computer name	Configuration
Server1	Microsoft Application Virtualization (App-V) management server
Client1	Physical computer that runs Windows 8
Server2	Microsoft Application Virtualization (App-V) publishing server
Client2	Virtual machine that runs Windows 8

You plan to sequence 15 applications that will be deployed to the virtual desktops.

You need to identify which computers must be used to run the App-V Sequencer.

Which computer should you identify? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Server1
- B. Client1
- C. Server2
- D. Client2

Correct Answer: D

QUESTION 5

You publish App3 as a RemoteApp program.

You need to configure App3 to meet the application requirements.

What should you do?

- A. On the RD Session Host servers, modify the Windows Installer RDS Compatibility setting. On client computers, modify the Remote Desktop Connection settings.
- B. From Remote Desktop Services, modify the properties of the App3 RemoteApp program. On the client computers, configure the RemoteApp and Desktop Connection feed.
- C. From Remote Desktop Services, modify the properties of the collection to which the App3 RemoteApp program is published. On the client computers, configure the RemoteApp and Desktop Connection feed.
- D. From Remote Desktop Services, modify the properties of the collection to which the App3 RemoteApp program is published. On client computers, modify the Remote Desktop Connection settings.

Correct Answer: B
