### QUESTION 1

You need to create an operating system image for the deployment of Windows 8. The solution must meet the technical requirements. What should you create?

- A. A script that runs the WIM2VHD utility.
- B. A stand-alone media task sequence.
- C. A capture media task sequence.
- D. A build and capture task sequence.

Correct Answer: D

An existing virtual machine that runs Windows 8 must be used as the reference computer for the deployment of new client computers.

<http://www.kozeniauskas.com/itblog/2008/01/18/sccm-creating-capture-media/>

A build and capture task sequence is used to create the Master (or Core) image.

The image created in the build and capture task is the image to be used in the Deploy Task Sequence.

---

### QUESTION 2

Your network contains an Active Directory domain named contoso.com. You plan to deploy personal virtual desktops.

You create a standard desktop that contains multiple desktop shortcuts to line-of-business applications. Administrators frequently update the desktop shortcuts.

You need to recommend a solution to prevent users from modifying the desktop shortcuts and from adding additional files to the desktop.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Roaming profiles and NTFS permissions
- B. Mandatory profiles
- C. User profile disks
- D. Folder Redirection and NTFS permissions

Correct Answer: D

---

### QUESTION 3

You need to deploy Windows 8 to the client computers in the Moscow office. The solution must meet the migration requirements. What should you do first?

- A. From the Windows Deployment Services console, add a boot image.
- B. From the Windows Deployment Services console, add an install image.
- C. From the Deployment Workbench, select New Media.
- D. From the Deployment Workbench, select New Linked Deployment Share

Correct Answer: C

The assumption is we only want to use the WAN link when absolutely required. If we create a Linked Deployment Share, all selected data would be replicated to Moscow from New York.

By managing the Task Sequence/Share locally in Moscow with no link to New York, you're only downloading the media and software one time.

Solution: Use MDT to create a bootable image for a DVD or external drive.

Step 1: Create selection profiles.

Step 2: Create your media.

Step 3: Update your media.

Step 4: Prepare your media.

Step 5: Use your media on the client machine.

Optional: Customize or automate your media.

---

### QUESTION 4

You identify a hotfix published on the Microsoft Support website. The hotfix applies to a locally installed application.

You need to apply the hotfix to all of the client computers that have the application installed.

What should you do?

- A. Create a Group Policy startup script that runs wuactl.exe.
- B. Run wsusutil.exe and specify the import switch.
- C. Create a Group Policy startup script that runs wusa.exe.
- D. Run wsusutil.exe and specify the use custom website switch.

Correct Answer: C

<http://support.microsoft.com/kb/934307>

WUSA can be used to script hotfix installations. Hotfixes that are downloaded from MS but not available as part of the standard update catalog cannot be installed with WSUS.

---

#### QUESTION 5

You need to recommend a solution for protecting the files stored on the laptop computers of the sales users. The solution must meet the sales department requirements. What should you recommend?

- A. BitLocker Drive Encryption (BitLocker) that uses a SID-based protector.
- B. BitLocker Drive Encryption (BitLocker) that uses a password protector.
- C. Encrypting File System (EFS) that uses certificates from a certification authority (CA).
- D. Encrypting File System (EFS) that uses self-signed certificates.

Correct Answer: B

-All of the files on the laptop computers must be encrypted.

Active Directory SID-based protector. This protector can be added to both operating system and data volumes, although it does not unlock operating system volumes in the pre-boot environment. The protector requires the SID for the domain

account or group to link with the protector. BitLocker can protect a clusteraware disk by adding a SID-based protector for the Cluster Name Object (CNO) that lets the disk properly failover to and be unlocked by any member computer of the

cluster.

The ADAccountOrGroup protector requires the use of an additional protector for use (such as TPM, PIN, or recovery key) when used on operating system volumes To add an ADAccountOrGroup protector to a volume requires either the

actual domain SID or the group name preceded by the domain and a backslash. In the example below, the CONTOSO\Administrator account is added as a protector to the data volume G.

Active Directory-based protectors are normally used to unlock Failover Cluster enabled volumes.
