QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain has Remote Desktop Services (RDS) deployed.

The domain contains two servers named Server1 and Server2 that have the Remote Desktop Web Access role service installed. The RD Web Access sites are accessible by using the URL <https://rdp.contoso.com/rdweb>.

You connect to <https://rdp.contoso.com/rdweb> and you receive the error message shown in the exhibit. (Click the Exhibit button.)

You need to prevent the error message from appearing when users connect to the RD Web Access sites.

You obtain a server certificate for [rdp.contoso.com](https://rdp.contoso.com/rdweb) from a trusted certification authority (CA).

What should you do next?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. On Server1 and Server2, open the Certificates console and import the server certificate to the Trusted Publishers store.
- B. On Server1 and Server2, open the Certificates console and import the server certificate to the Remote Desktop certificate store.
- C. From Server Manager, open the properties of the RDS deployment and select the server certificate.
- D. On Server1 and Server2, open Internet Information Services (IIS) Manager and modify the bindings of the Default

Web Site.

Correct Answer: C

You can click Task -> Edit Deployment Properties, in the Certificate tab, you can configure the certificate for RD Web Access. <http://social.technet.microsoft.com/Forums/windowsserver/en-US/b71b2aaf-9f00-44f8-8c7bb6d369af14c9/rd-web-access-certificate-in-server-2012-how-to-install?forum=winserverTS>

Manage certificates

A Remote Desktop Services deployment requires certificates for server authentication, single sign-on, and establishing secure connections.

Current deployment certificate level is **Not Configured**

What is a certificate level?

Role Service	Level	Status	State
RD Connection Broker - Enable Sing	Not Configured	--	
RD Connection Broker - Publishing	Not Configured	--	
RD Web Access	Not Configured	--	
RD Gateway	Untrusted	OK	

Subject name: Not Applicable
[View Details](#)

This certificate is required to enable RemoteApp and Desktop Connection subscription and server authentication for RD Web Access.

You can update this certificate by creating a new certificate or by selecting an existing certificate.

Select existing certificate...

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains five servers that run Windows Server 2012 and 500 client computers that run Windows 7.

You deploy five third-party applications named App1, App2, App3, App4, and App5 to 50 of the client computers.

You need to recommend an application update solution for the third-party applications. The solution must ensure that an administrator can generate reports that contain installation information.

What should you recommend implementing?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Windows Server Update Services (WSUS)
- B. Windows Intune
- C. Assigned applications by using Group Policy
- D. Microsoft System Center 2012 Configuration Manager

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains servers that run Windows Server 2012.

You plan to deploy a Remote Desktop Virtualization Host (RD Virtualization Host) that will contain five virtual desktops. The requirement of each virtual desktop is shown in the following table.

Virtual desktop name	Requirement
VD1	Must support creating snapshots of virtual disks.
VD2	Must support dynamically expanding virtual disks.
VD3	Must support differencing virtual hard disks.
VD4	Must support adding or removing storage when the virtual machine runs.
VD5	Must support at least three virtual disk controllers each virtual machine.

You need to identify which virtual desktop or virtual desktops require a virtual SCSI controller.

Which virtual desktop or desktops should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. VD1
- B. VD2

- C. VD3
- D. VD4
- E. VD5

Correct Answer: AD

QUESTION 4

Your network contains an Active Directory domain named contoso.com. All client computers run Windows 7.

You plan to upgrade all of the client computers to Windows 8.

You install the Microsoft Application Compatibility Toolkit (ACT) on a server named Server1.

You configure Server1 to host the Log Processing Service shared folder,

You need to recommend which permissions must be assigned to the Log Processing Service shared folder. The solution must provide the least amount of permissions to the shared folder.

Which permissions should you recommend assigning to the Everyone group on the shared folder? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Write NTFS permissions
- B. Read NTFS permissions
- C. Change Share permissions
- D. Read NTFS permissions and Execute NTFS permissions
- E. Read Share permissions

Correct Answer: ACE

<http://technet.microsoft.com/en-us/library/hh824812.aspx> The Everyone group must have Change and Read permissions to the ACT LPS share. The Everyone group must have Write access to the ACT LPS share.

QUESTION 5

You need to configure the virtualized applications to ensure that they download fully before they can run on the client computers. What should you use?

- A. Microsoft System Center 2012 App Controller
- B. The App-V Sequencer
- C. Microsoft System Center 2012 Virtual Machine Manager (VMM)
- D. The Application Virtualization Management Console

Correct Answer: B
