QUESTION 1

If a Dockerfile references the container's base image without a specific version tag, which tag of that image is used to create the container?

- A. latest
- B. default
- C. current
- D. nightly
- E. Its

Correct Answer: A

<https://docs.docker.com/engine/reference/commandline/build/>

QUESTION 2

Which of the following benefits are realized by using immutable servers? (Choose TWO correct answers)

- A. Immutable servers are flexible in how they are configured during their deployment.
- B. Immutable servers are not connected to a network and cannot be attacked remotely.
- C. Immutacle servers are usable right after they are started without further configuration.
- D. Immutable servers bundle all components required for an application and never need external services.
- E. Immutable servers ensure production servers are identical staging servers.

Correct Answer: CE

QUESTION 3

Which of the following information is contained in the output of git status? (Choose three correct answers.)

- A. Changed files that will not be part of the next commit.
- B. Locked files which cannot be edited until the lock is released.
- C. Changed files that will be part of the next commit.
- D. Unchanged files which have not been edited locally.
- E. Untracked files which are not subject to version control.

Correct Answer: ACE

QUESTION 4

The file index.php, which is being maintained in a git repository, was changed locally and contains an error. If the error has not been committed to the repository yet, which of the following git commands reverts the local copy of index.php to the latest committed version in the current branch?

- A. git lastver "" index.php
- B. git revert "" index.php
- C. git checkout "" index.php
- D. git clean "" index.php
- E. git repair "" index.php

Correct Answer: C

<https://git-scm.com/docs/git-revert>

QUESTION 5

The following command is issued on two docker nodes:

```
docker network create --driver bridge isolated_nw
```

Afterwards, one container is started at each node with the parameter --network=isolated_nw. It turns out that the containers can not interact with each other.

What must be done in order to allow the containers to interact with each other? (Choose two correct answers.)

- A. Use a host network instead of a bridged network.
- B. Add the option --inter-container to the docker network create command.
- C. Start the containers on the same node.
- D. Change the --network parameter of docker create to --network=isolated_nw,nofence.
- E. Use an overlay network instead of a bridged network.

Correct Answer: CE

<https://docs.docker.com/v17.09/engine/userguide/networking/#bridge-networks>
