### QUESTION 1

You are a help desk technician for a financial company that uses Skype for Business Online.

You need to ensure that employees at your company are able to connect with Skype consumer users.

Which Skype for Business Online organizational setting should you enable?

- A. public IM connectivity
- B. presence privacy mode
- C. mobile phone notifications
- D. domain federation

Correct Answer: A

### QUESTION 2

You are an IT intern for a law firm. The firm is evaluating the use of Microsoft Intune to manage the firm's computing devices. Which two tasks can be performed by using Intune? Choose two.

- A. deploying a Windows operating system
- B. deploying software updates
- C. managing Android devices
- D. managing Windows servers

Correct Answer: BC

B: When new updates are available from Microsoft Update, or you have created a third-party update, and they are applicable to your managed computers, a notification is displayed on the Overview page of the Updates workspace. After you click this notification link, you can then perform various operations like viewing more information about the update, approving or declining the update, and viewing the computers that will install the update if it is approved.

C: Intune provides secure management of personal and corporate-owned devices across the most popular platforms, including Windows, Windows Phone, iOS, and Android.

---

### QUESTION 3

This question requires that you evaluate the underlined text to determine if it is correct.

Cloud Infrastructure as a Service (IaaS) allows the consumer to deploy consumer-acquired applications that are created by using programming languages and tools that the provider supports.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. Backend as a Service (BaaS)
- B. No change is needed.
- C. Platform as a Service (PaaS)
- D. Software as a Service (SaaS)

Correct Answer: C

#### QUESTION 4

Which three items are required in order to create a new user in Microsoft Intune? Choose three.

- A. last name
- B. user role
- C. user name
- D. display name
- E. user location

Correct Answer: CD

CD: For each user you must include the user name (like bob@contoso.com) and a display name (like Bob Kelly).

E: To manually add individual user accounts

1.

In the Microsoft Intune account portal, click Users > New.

2.

Click User to start the New users wizard. a) On the Details page, complete the required fields. b) On the Settings page, set the location for the user.

c) On the Group page, click Next to accept the default and assign a license for Intune to the user account. By default, the check box is selected, which assigns a license for Intune to the user account. d) On the Email page, specify up to five

email addresses to receive notification of the user name and temporary password for the account. Separate multiple email addresses by semicolons (;). When ready, click Create to add the user account to your subscription.

e) On the Results page, you can view the new account name and its temporary password. Intune automatically creates the temporary password. The new user account now appears in the Users node of the account portal. When the user

signs-in for the first time, the user must specify a new password for the account.

#### QUESTION 5

You are the help desk technician for a local real estate firm that uses Microsoft Exchange Online.

A former employee is sending unwanted emails to employees within the firm.

You need to prevent this employee from sending emails to anyone at the firm.

What should you do?

- A. Create a malware filter policy.
- B. Configure a message trace.
- C. Create a content filter policy.
- D. Create a transport rule.

Correct Answer: D

You can use Exchange transport rules to look for specific conditions in messages that pass through your organization and take action on them. Transport rules are similar to the Inbox rules that are available in many email clients. The main difference between transport rules and rules you would set up in a client application such as Outlook is that transport rules take action on messages while they're in transit as opposed to after the message is delivered. Transport rules also contain a richer set of conditions, exceptions, and actions, which provides you with the flexibility to implement many types of messaging policies.
