-  **800,000+** Satisfied Customers

### QUESTION 1

You need to encrypt data by using a public key and a private key. Which .NET class should you use?

- A. DESCryptoServiceProvider
- B. RijndaelManaged
- C. DSACryptoServiceProvider
- D. TripleDESCryptoServiceProvider

Correct Answer: C

You can use the DSACryptoServiceProvider class to create digital signatures and protect the integrity of your data.

To use a public-key system to digitally sign a message, the sender first applies a hash function to the message to create a message digest. The sender then encrypts the message digest with the sender's private key to create the sender's

personal signature.

### QUESTION 2

Which programming languages can be managed, unmanaged, or both? (To answer, drag the appropriate option or options to the correct location or locations in the answer area. An option may be moved to more than one location, and some options may not be moved at all.)

Select and Place:

Coding Type	C	C#	C++	Visual Basic .NET
Managed				
Unmanaged				
Both				

Correct Answer:

Note:

\* Managed code is a term coined by Microsoft to identify computer program source code that requires and will only execute under the management of a Common Language Runtime virtual machine (resulting in bytecode). This applies to both C# and VB .Net. Managed code needs a runtime (like the .NET CLR) to execute.

\* Microsoft's Visual C++ development environment can produce both managed code, running under the .NET CLR, or compiled binaries, running directly on the Windows platform with the help of its C++ Runtime Library.

### QUESTION 3

An event declaration is shown in the following code segment. `Public Event NewProduct As NewProductEventHandler`  
What is `NewProductEventHandler` in the event declaration?

- A. An enumeration that defines the type of the `NewProduct` variable.
- B. A built-in data type for handling events.
- C. The name of the delegate that will dispatch the event.
- D. The name of the class method that will catch the event.

Correct Answer: C

### QUESTION 4

Which two elements are included in a .NET assembly? (Choose two.)

- A. Microsoft Intermediate Language (MSIL) code
- B. Extensible Markup Language (XML) code
- C. Extensible Application Markup Language (XAML) code
- D. Type metadata

E. Declared variable types

Correct Answer: AD

In general, a static assembly can consist of four elements:

/ The assembly manifest, which contains assembly metadata.

/ (D) Type metadata.

/ (A) Microsoft intermediate language (MSIL) code that implements the types.

/ A set of resources.

Single-file assembly

**MyAssembly.dll**

Assembly manifest
Type metadata
MSIL code
Resources

**QUESTION 5**

A base class named MasterData is defined according to the following code segment.

```
Public Class MasterData
    Public Overridable Sub LoadData()
        Console.WriteLine("Loading Data")
    End Sub
End Class
```

Which code segment should you use to define a method named LoadData that overrides the method in the MasterData class?

```
Public Class EmployeeData
    Inherits MasterData
    Public Sub LoadData()
        Console.WriteLine("Loading Employee Data...")
    End Sub
End Class
```

A.

- B. `Public Class EmployeeData`  
    `Inherits MasterData`  
    `Public Shadows Sub LoadData()`  
        `Console.WriteLine("Loading Employee Data...")`  
    `End Sub`  
`End Class`
- C. `Public Class EmployeeData`  
    `Inherits MasterData`  
    `Public Overrides Sub LoadData()`  
        `Console.WriteLine("Loading Employee Data...")`  
    `End Sub`  
`End Class`
- D. `Public Class EmployeeData`  
    `Inherits MasterData`  
    `Public Overridable Sub LoadData()`  
        `Console.WriteLine("Loading Employee Data...")`  
    `End Sub`  
`End Class` 

B. C. D.

Correct Answer: C
