QUESTION 1

Which of the following statements is wrong when comparing RDS with self-built database?

A. RDS features a high availability of 99.95% while self-built database requires you to implement data protection, primary-standby replication, and RAID all by yourself.

B. RDS provides automatic backup while self-built database requires you to prepare storage space for backup copies and regularly verify that these copies can be restored.

C. Self-built database supports quick deployment and elastic scaling.

D. RDS requires no OandM while self-built database requires a dedicated DBA for maintenance, which results in high HR cost.

Correct Answer: C

QUESTION 2

SQL injection is a common application layer attack, usually through building special input parameters and pass it to web applications to steal or sabotage the application data. Which of the following is the target for SQL injection?

A. Web application

B. Database

C. Confidential files on the server

D. Pictures on server

Correct Answer: B

Reference: https://www.rapid7.com/fundamentals/sql-injection-attacks/

QUESTION 3
