QUESTION 1

When you create an Alibaba Cloud VPC, a VRouter and a route table will be created automatically. Which of the following statements is NOT correct about the route table?

- A. Each VRouter may have multiple route tables.
- B. When a VPC is deleted, the corresponding route table is also deleted.
- C. This route table cannot be deleted
- D. The routing entries of the route table can not be modified manually.

Correct Answer: B

QUESTION 2

The difference between public and private Server Load Balancers (SLBs) is that private SLBs connect to their backend ECS instances using the private network (Intranet) while public SLBs connect to their backend ECS instances using the public network (Internet).

- A. True
- B. False

Correct Answer: B

QUESTION 3

Company A constructed a sales management platform using three Elastic Compute Service (ECS) instances. One of the instances runs MySQL, and is used as the database server. The other two instances are used as Web servers. After some time, the number of employees in Company A dramatically increases, leading to higher sales volumes. At the same time, the platform response speed is gradually decreasing too.

According to the report from CloudMonitor, the average CPU utilization rate of the two Web servers exceeds 70%, and database load reaches 75%. Company A can select Alibaba Cloud _____ services to cope with the issue and optimize the performance. (Number of correct answers: 2)

- A. Import database data into Object Storage Service (OSS) to share the storage pressure on the platform
- B. Incorporate Server Load Balancer (SLB) and add additional ECS instances to relieve the load on existing ECS instances
- C. Use Content Delivery Network (CDN) to enhance content loading speed
- D. Replace the self-built MySQL database with ApsaraDB for RDS to obtain better database performance, and utilize RDS read-only instances to handle read-only requests

Correct Answer: BD

QUESTION 4

If an administrator often needs to manage multiple ECS instances in an Alibaba Cloud VPC through the Internet. Which of the following solutions can meet this need at low costs and without affecting system security.

- A. None of these answers are correct.
- B. Choose an ECS instance from VPC and make it as the bastion host And then, apply an EIP and bind it to this ECS instance. After that the administrator can manage other ECS instances through this bastion host.
- C. Modify the VPC Security Group policy, to allow access from the Internet.
- D. Bind an EIP to each of the ECS instances, and Jog on to each of these ECS instances to manage them.

Correct Answer: A

QUESTION 5

Alibaba Cloud Server Load Balancer (SLB) provides services for distributing traffic among multiple ECS instances SLB can expand the application system\\'s service capacity through traffic distribution, and improve the system\\'s availability by eliminating SPoFs (Single Points of Failure). Which of the following statements are correct? (Number of correct answers; 2)

- A. One of SLB\\'s features is the Health Check. If some of the backend ECS instances are down, whereas other backend ECS instances can still provide services, then the system can continue to work normally.
- B. When recreating an SLB instance that has an Internet IP address, a new Internet IP address will be assigned to the SLB instance.
- C. Before using SLB to provide external services, make sure that you have installed and correctly configured the SLB agent on all of the backend ECS instances.
- D. SLB provides a function to automatically synchronize data among backend ECS instances using rsync remote synchronization.

Correct Answer: AD
