QUESTION 1

A merchant tasks you to keep sales managers out of the system configuration backend pages.

How do you do that using the admin interface?

A. You remove access to the restricted pages from each user\\'s ACL settings

B. You create a role with limited permissions and assign all sales manager users to the new role

C. This is not possible in a native Magento instance and requires customization

D. You create a role with access to the system configuration pages and assign it to all users except the sales managers

Correct Answer: B

QUESTION 2

You are debugging a problem resulting from a recently deployed around plugin. The plugin is intercepting the doSomething method. The aroundDoSomething plugin method is called successfully, but the original doSomething method is no longer being executed as expected.

What is causing this?

A. The sort order of the plugin is too high and supersedes the priority of the intercepted method

B. The plugin implementation returned something other than its callable argument

C. The plugin implementation is skipping the execution of its callable argument

D. The plugin implementation overlooked using the AbstractPlugin parent class

Correct Answer: C

QUESTION 3

You are implementing a customization of the sales management within a module MyCompany_MySalesProcess. You have created several event observers to add the custom functionality. Each observer is a separate class, but they require some common functionality. How do you implement the common functionality in the event observers, keeping maintainability and testability in mind?

A. You create a trait with the common methods and use the trait in the observer classes.

B. You create an abstract class AbstractObserver with the common methods and extend the observer classes from it.

C. You create a regular class implementing the common functionality as public static methods and call those from the observers.

D. You create a regular class implementing the common functionality as public methods and use constructor injection to make them available to the observers.

Correct Answer: D

QUESTION 4

Assume that $collection is a new instance of a class that extends Magento\Framework\Model\ResourceModel\Db\Collection\AbstractCollection, and $ids is an array of ids. How do you select a list of records from the database where the record ids are in the $ids list?

A $collection->addFieldToFilter('record_id',['in'=>$ids]);

B
```
$collection->addFilter($filterBuilder
        ->setType('in')
        ->setValue($ids)
        ->create()
);
where $filterBuilder is an instance of a \Magento\Framework\Api\FilterBuilder class.
```

C $collection->in($ids);

D $collection->filterIn($ids);

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A

QUESTION 5

You have added a new attribute origin of the type varchar to the product entity.

Which two calls will filter a product collection with origin set to "California"? (Choose two.)

A. $collection->addFieldToFilter(`origin\\', "California");

B. $collection->addAttributeToSelect(`origin\\', "California");

C. $collection->joinAttribute(`origin\\', `catalog_product/origin\\', `origin\\', `California");

D. $collection->addAttributeToFilter(`origin\\', "California");

Correct Answer: AD
