QUESTION 1

Which of the following can cause water sludge in engine crankcase oil?

- A. water condensation in the crankcase
- B. changing your oil too frequently
- C. using synthetic oil
- D. using a low viscosity oil

Correct Answer: A

Water condensation in the crankcase is a leading cause of oil sludge. Changing your oil frequently and using synthetic oil can help eliminate sludge.

QUESTION 2

Overheating the engine can cause all of the following problems EXCEPT _____.

- A. burned engine bearings
- B. enlarged pistons
- C. melted engine parts
- D. improved fuel efficiency

Correct Answer: D

QUESTION 3

An Allen wrench _____.

- A. is made exclusively by the Allen Manufacturing Company, LLC.
- B. fits all kinds of screws.
- C. fits screws with an octagonal recess in the head.
- D. fits screws with a hexagonal recess in the head.

Correct Answer: D

An Allen wrench fits screws with a hexagonal recess in the head of the screw.

QUESTION 4

Talking about the radiator, it is more common for a car to overheat during hot days than on cold days because _____.

- A. with direct sunlight, the cooling system does not work
- B. the air that is supposed to cool the fluid or the coolant that flows through the radiator is not cool enough to do the job, hence overheating can happen
- C. the radiator automatically shuts off when the outside temperature is too high
- D. hot days have the tendency to melt the radiator

Correct Answer: B

QUESTION 5

In the typical workshop, a plane is used for what purpose?

- A. removing thin strips of wood
- B. welding metal
- C. curing concrete
- D. loosening bolts

Correct Answer: A

A plane is a hand tool that has a sharp blade extending slightly below the bottom surface of the tool. The plane is pushed across the surface of a piece of wood and the blade removes a thin layer of wood from the surface.
