QUESTION 1

What factors should be considered when designing the Blue Prism Database Server Environment? (Choose four.)

A. Whether windows authentication or SQL Native authentication will be used for the Database Connection.

B. Backup and log truncation should be reviewed according to business criticality

C. Database and Log backup.

D. Ensuring that the application servers have full sysadmin rights to the database.

E. Proximity of the database server to the Blue Prism Application server.

F. Selection of the database platform, between SQL server and Oracle.

G. Ensuring that the database server can be accessed from all Runtime Resources within the network.

Correct Answer: ACDF

QUESTION 2

What network connections should be considered, when deploying runtime resources on the other side of a firewall from the Application server? (Choose two.)

A. Remoting connections between Application server and runtime resource

B. Instructional communications between Interactive Clients and Runtime resource

C. Database connection between the database server and Runtime resource

D. Inbound web services connections from the Application server to Runtime resource

Correct Answer: AC

QUESTION 3

What must be considered before operating multiple Runtime Resources on a single Windows desktop?

A. There are no conditions, only one Runtime Resource can be set to listen per Windows session.

B. Each Runtime Resource must listen on a different port and the processes which run on the device must not impact other processes on the same device.

C. Each Runtime Resource must listen on the same port and the processes which run on the device must not impact other processes on the same device.

D. Each Runtime Resource must listen on a different port.

Correct Answer: B

QUESTION 4

When is virtualization of a dedicated Interactive Client System most appropriate? (Choose two.)

A. Interactive Clients should never be virtualized

B. For Process Development – it helps to ensure the Interactive Client has the same configuration as the virtualized Runtime Resources

C. Where the developers are geographically separate to the Blue Prism environment

D. To ensure a high-latency connection between the Interactive Client and the Application Server

E. Whenever runtime resources are virtualized

Correct Answer: CD

QUESTION 5

What should be considered when configuring high availability and disaster recovery scenarios for availability of Business Processes managed by Blue Prism? (Choose two.)

A. Resource pools and Active Queues can be used to distribute work to Runtime Resources which are online

B. The Runtime Resources are "stateful" devices, therefore any failure or maintenance event should also be taken into account in the process design and scheduling methodology

C. Using a load balancer and 2 application servers will ensure high availability of an automated process

D. Use the setting within a Blue Prism Process to force a process to fail over to an alternative Runtime Resource in the event of a failure.

Correct Answer: AC
