QUESTION 1

An Alexa Skill Builder is developing a skill that enables users to purchase train tickets. The Builder wants to give users the ability to modify the departure time if they are misunderstood, before the skill proceeds to purchase the tickets.

Which option should be used to implement this functionality within the session?

- A. Implement AMAZON.FallbackIntent so the user can stop the execution when they have been misunderstood.
- B. Implement AMAZON.StopIntent so the user can stop the execution and implement reprompt with a new invocation of the skill.
- C. Implement AMAZON.CancelIntent so the user can cancel the order, then set shouldEndSession to false, and prompt the user for the next action.
- D. Implement the welcome message, providing clear instructions to the user describing how to format an order.

Correct Answer: C

QUESTION 2

An Amazon Alexa skill fetches data for users from a third-party API and the wait for the response from that call is variable, often taking up to 5 seconds.

What is the recommended method for notifying users that a skill is working on the request and has not failed to respond?

- A. Prefetch the data that is expected to be required by the skill from the third-party API using Amazon CloudWatch Events.
- B. Call the Progressive Response API and send a directive, such as VoicePlayer.Speak
- C. Ask a follow-up question for clarification to engage the user while waiting for the initially requested response.
- D. Respond to the user stating that the data will be ready soon, and upon the next launch of the skill, provide the user with the response they initially requested.

Correct Answer: B

QUESTION 3

An Alexa Skill Builder needs to have knowledge of the previous prompt that was presented to the user in order to give context to the user's response.

How can the Builder accomplish this?

- A. Find the corresponding prompt using the list events feature

- B. Store a reference to the prompt used as a session attribute
- C. Call the Intent Request History API to identify which prompt was used.
- D. Parse the context object from the skill request.

Correct Answer: C

QUESTION 4

When testing an Amazon Alexa skill using the Test page in the developer console, the JSON output is null. What is the MOST likely cause?

- A. The AWS Lambda function is encountering an error and is not returning a result.
- B. The endpoint ARN has not been configured
- C. The ASK has not been granted access to trigger the AWS Lambda function
- D. Skill ID verification has been disabled

Correct Answer: B

QUESTION 5

AMAZON.MoreIntent is comparable to which of the following Amazon Alexa intents? (Choose two.)

- A. AMAZON.ResumeIntent
- B. AMAZON.ScrollDownIntent
- C. AMAZON.RepeatIntent
- D. AMAZON.ScrollRightIntent
- E. AMAZON.LoopOnIntent

Correct Answer: BD
