QUESTION 1

A company creates business-critical 3D images every night. The images are batch-processed every Friday and require an uninterrupted 48 hours to complete. What is the MOST cost-effective Amazon EC2 pricing model for this scenario?

A. On-Demand Instances

B. Scheduled Reserved Instances

C. Reserved Instances

D. Spot Instances

Correct Answer: B

QUESTION 2

In AWS Identity and Access Management (IAM), you can make use of the _____ APIs to grant users temporary access to your resources.

A. AWS Security Transport Service (STS)

B. AWS Security Tree Service (STS)

C. AWS Security Task Service (STS)

D. AWS Security Token Service (STS)

Correct Answer: D

AWS Security Token Service enables the creation of temporary credentials that can be used along with IAM in order to grant access to trusted entities and users to your AWS resources for a predefined amount of time.

QUESTION 3

During a review of business applications, a Solutions Architect identifies a critical application with a relational database that was built by a business user and is running on the user\\'s desktop. To reduce the risk of a business interruption, the Solutions Architect wants to migrate the application to a highly available, multi-tiered solution in AWS.

What should the Solutions Architect do to accomplish this with the LEAST amount of disruption to the business?

A. Create an import package of the application code for upload to AWS Lambda, and include a function to create another Lambda function to migrate data into an Amazon RDS database

B. Create an image of the user\\'s desktop, migrate it to Amazon EC2 using VM Import, and place the EC2 instance in an Auto Scaling group

C. Pre-stage new Amazon EC2 instances running the application code on AWS behind an Application Load Balancer and an Amazon RDS Multi-AZ DB instance

D. Use AWS DMS to migrate the backend database to an Amazon RDS Multi-AZ DB instance. Migrate the application code to AWS Elastic Beanstalk

Correct Answer: B

QUESTION 4

A development team is building an application with front-end and backend application tiers. Each tier consists of Amazon EC2 instances behind an ELB Classic Load Balancer. The instances run in Auto Scaling groups across multiple Availability Zones. The network team has allocated the 10.0.0.0/24 address space for this application. Only the front-end load balancer should be exposed to the Internet. There are concerns about the limited size of the address space and the ability of each tier to scale.

What should the VPC subnet design be in each Availability Zone?

A. One public subnet for the load balancer tier, one public subnet for the front-end tier, and one private subnet for the backend tier.

B. One shared public subnet for all tiers of the application.

C. One public subnet for the load balancer tier and one shared private subnet for the application tiers.

D. One shared private subnet for all tiers of the application.

Correct Answer: A

QUESTION 5

A web application runs on 10 EC2 instances launched from a single customer Amazon Machine Image (AMI). The EC2 instances are behind an Internet Application Load Balancer. Amazon Route 53 provides DNS for the application. How should a Solutions Architect automate recovery when a web server instance stops replying to request?

A. Launch the instances in an Auto Scaling group with an Elastic Load Balancing health check.

B. Launch instances in multiple Availability Zones and set the load balancer to Multi-AZ.

C. Add CloudWatch alarm actions for each instance to restart if the Status Check (Any) fails.

D. Add Route 53 records for each instance with an instance health check.

Correct Answer: A
