**QUESTION 1**

In an Ethernet network, broadcast traffic is received and processed by

- A. All devices on the network, making it unsuitable for network video since the network load would be unacceptable.
- B. All devices on the network, making it suitable for network video since any device can access the video without any overhead from establishing a separate connection to the server.
- C. Only those devices that have registered with the server to receive the traffic, making it unsuitable for network video, due to the overhead from establishing a separate connection to the server.
- D. Only those devices that have registered with the server to receive the traffic, making it suitable for network video since the network load would be kept reasonable.

Correct Answer: A

---
