### QUESTION 1

You have an Azure subscription named Subscription1 that is used by several departments at your company. Subscription1 contains the resources in the following table:

Name	Type
Storage1	Storage account
RG1	Resource group
Container1	Blob container
Share1	File share

Another administrator deploys a virtual machine named VM1 and an Azure Storage account named Storage2 by using a single Azure Resource Manager template.

You need to view the template used for the deployment.

From which blade can you view the template that was used for the deployment?

- A. RG1
- B. VM1
- C. Storage1
- D. Container1
- E. Storage2

Correct Answer: A

1.

View template from deployment history

Go to the resource group for your new resource group. Notice that the portal shows the result of the last deployment. Select this link.

2.

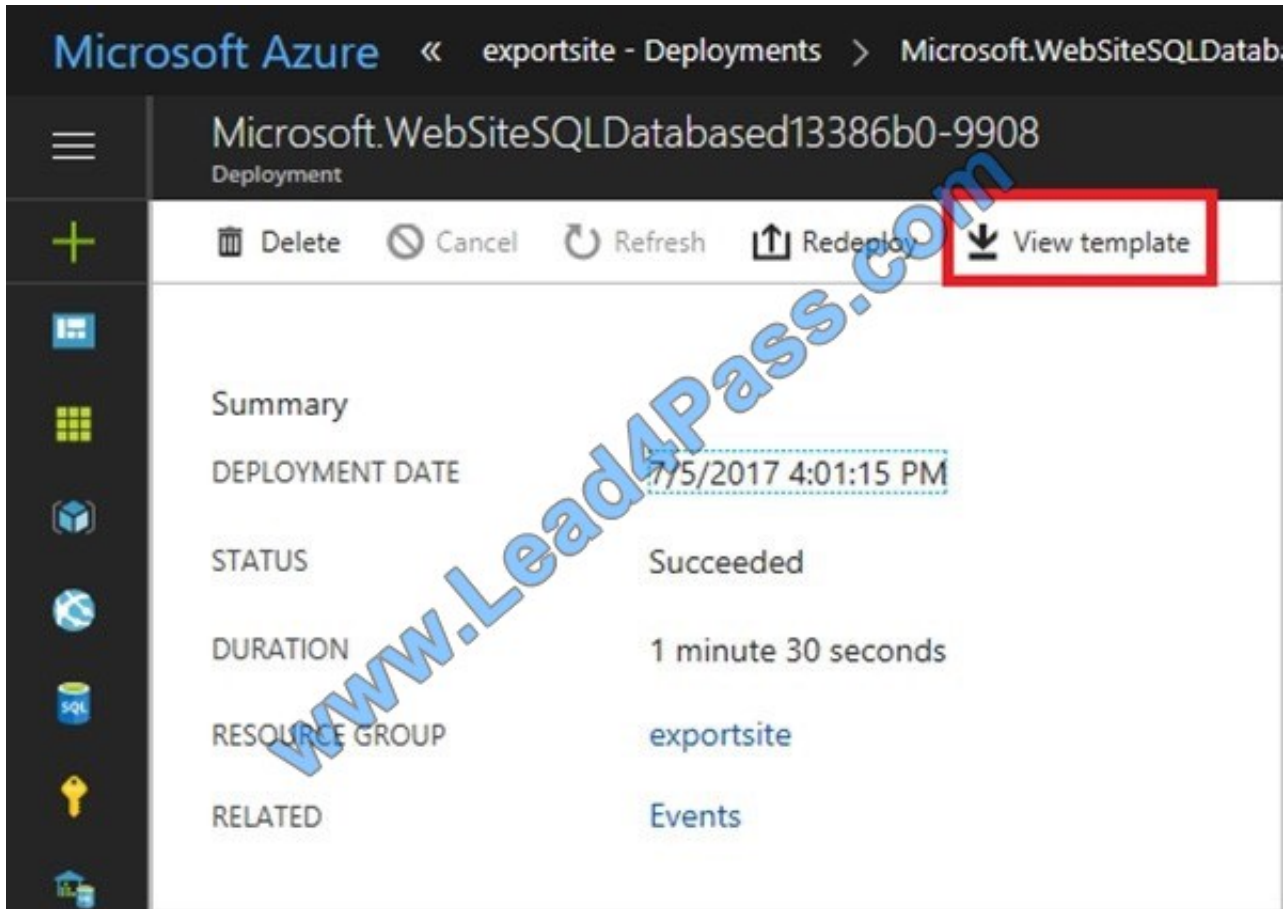

You see a history of deployments for the group. In your case, the portal probably lists only one deployment. Select this deployment.

The screenshot shows the Azure portal interface for a resource group named 'exportsite'. On the left, there is a navigation pane with 'Overview' selected. The main area displays deployment details for 'Microsoft Azure Consumption'. A red box highlights the text 'Deployments 1 Succeeded'.

This screenshot shows the deployment details for a specific deployment. At the top, there are action buttons: Delete, Cancel, Redeploy, and View template. Below these is a search bar with the placeholder text 'Search for deployments by name...'. The deployment is listed in a table with columns 'DEPLOYMENT NAME' and 'STATUS'. The deployment name is 'Microsoft.WebSiteSQLDatabased1...' and its status is 'Succeeded', indicated by a green checkmark. A red box highlights the deployment name.

The portal displays a summary of the deployment. The summary includes the status of the deployment and its operations and the values that you provided for parameters. To see the template that you used for the deployment, select View template.

## QUESTION 2

You have an Azure Active Directory (Azure AD) tenant.

All administrators must enter a verification code to access the Azure portal.

You need to ensure that the administrators can access the Azure portal only from your on-premises network.

What should you configure?

- A. the multi-factor authentication service settings
- B. the default for all the roles in Azure AD Privileged Identity Management
- C. an Azure AD Identity Protection sign-in risk policy
- D. an Azure AD Identity Protection user risk policy

Correct Answer: C

## QUESTION 3

Which pricing tier should you recommend for WebApp1?

- A. P1v2
- B. D1
- C. B1
- D. S1

Correct Answer: D

#### QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has 100 users located in an office in Paris.

The on-premises network contains the servers shown in the following table.

Name	Operating system	Configuration
Server1	Windows Server 2012 R2	Microsoft Exchange Server 2016
Server2	Windows Server 2016	Microsoft SQL Server 2016
Server3	Windows Server 2016	Domain controller
Server4	Red Hat Enterprise Linux 7.5	File server

You create a new subscription. You need to move all the servers to Azure.

Solution: You use the Data Migration Assistant tool.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

The Data Migration Assistant tool is used to assess on-premises SQL Server instance(s) migrating to Azure SQL database(s).

### QUESTION 5

You create an Azure Storage account named contosostorage.

You plan to create a file share named data.

Users need to map a drive to the data file share from home computers that run Windows 10.

Which port should be open between the home computers and the data file share?

- A. 80
- B. 443
- C. 445
- D. 3389

Correct Answer: C

Ensure port 445 is open: The SMB protocol requires TCP port 445 to be open; connections will fail if port 445 is blocked.
