#### **QUESTION 1**

You have a Recovery Service vault that you use to test backups. The test backups contain two protected virtual machines.

You need to delete the Recovery Services vault.

What should you do first?

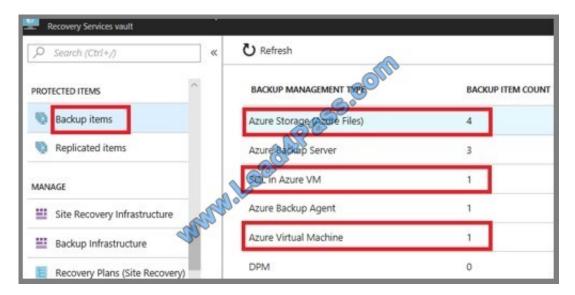

- A. From the Recovery Service vault, stop the backup of each backup item.
- B. From the Recovery Service vault, delete the backup data.
- C. Modify the disaster recovery properties of each virtual machine.
- D. Modify the locks of each virtual machine.

Correct Answer: A

You can\\'t delete a Recovery Services vault if it is registered to a server and holds backup data. If you try to delete a vault, but can\\'t, the vault is still configured to receive backup data.

Remove vault dependencies and delete vault

In the vault dashboard menu, scroll down to the Protected Items section, and click Backup Items. In this menu, you can stop and delete Azure File Servers, SQL Servers in Azure VM, and Azure virtual machines.

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure virtual machine named VM1. VM1 was deployed by using a custom Azure Resource Manager template named ARM1.ison.

You receive a notification that VM1 will be affected by maintenance.

You need to move VM1 to a different host immediately.

Solution: From the Overview blade, you move the virtual machine to a different resource group.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

You should redeploy the VM.

### **QUESTION 3**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has 100 users located in an office in Paris.

The on-premises network contains the servers shown in the following table.

Name	Operating system	Configuration
Server1	Windows Server 2012 R2	Microsoft Exchange Server 2016
Server2	Windows Server 2016	Microsoft SQL Server 2016
Server3	Windows Server 2016	Domain controller
Server4	Red Hat Enterprise Linux 7.5	File server

You create a new subscription. You need to move all the servers to Azure.

Solution: You use the Data Migration Assistant tool.

a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.  You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups.  Another administrator plans to create several network security groups (NSGs) in the subscription.  You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks.  Solution: From the Resource providers blade, you unregister the Microsoft. Classic Network provider. Does this meet the goal?  A. Yes  B. No	Does this meet the goal?
Correct Answer: B  The Data Migration Assistant tool is used to assess on-premises SQL Server instance(s) migrating to Azure SQL database(s).  QUESTION 4  Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  After you answer a question in this section, you will NOT be able to return to it. 	A. Yes
	B. No
Correct Answer: B	Correct Answer: B
Use a policy definition.	Use a policy definition.

### **QUESTION 5**

You download an Azure Resource Manager template based on an existing virtual machine. The template will be used to deploy 100 virtual machines.

You need to modify the template to reference an administrative password. You must prevent the password from being stored in plain text.

What should you create to store the password?

A. Azure Active Directory (AD) Identity Protection and an Azure policy

B. a Recovery Services vault and a backup policy

### https://www.lead4pass.com/az-100.html

2021 Latest lead4pass AZ-100 PDF and VCE dumps Download

C. an Azure Key Vault and an access policy

D. an Azure Storage account and an access policy

Correct Answer: C

You can use a template that allows you to deploy a simple Windows VM by retrieving the password that is stored in a Key Vault. Therefore, the password is never put in plain text in the template parameter file. References: https://azure.microsoft.com/en-us/resources/templates/101-vm-secure-password/
