QUESTION 1

You need to recommend an environment for the deployment of App1. What should you recommend?

A. a new App Service plan that uses the P3v2 pricing tier

B. ASE1 and an App Service plan that uses the I1 pricing tier

C. ASE1 and an App Service plan that uses the I3 pricing tier

D. a new App Service plan that uses the S1 pricing tier

Correct Answer: B

https://docs.microsoft.com/en-us/azure/app-service/environment/app-service-app-service-environment-control-inbound-traffic

QUESTION 2

HOTSPOT

You have an Azure virtual machine named VM1 that connects to a virtual network named VNet1. VM1 has the following configurations:

Subnet: 10.0.0.0/24

Availability set: AVSet

Network security group (NSG): None

Private IP address: 10.0.0.4 (dynamic)

Public IP address: 40.90.219.6 (dynamic)

You deploy a standard, Internet-facing load balancer named slb1.

You need to configure slb1 to allow connectivity to VM1.

Which changes should you apply to VM1 as you configure slb1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Before you create a backend pool on slb1, you must:

Create and assign an NSG to VM1
Remove the public IP address from VM1
Change the private IP address of VM1 to static

Before you can connect to VM1 from slb1, you must:

Create and configure an NSG
Remove the public IP address from VM1
Change the private IP address of VM1 to static

Correct Answer:

Answer Area

Before you create a backend pool on slb1, you must:

Create and assign an NSG to VM1
Remove the public IP address from VM1
Change the private IP address of VM1 to static

Before you can connect to VM1 from slb1, you must:

Create and configure an NSG
Remove the public IP address from VM1
Change the private IP address of VM1 to static

QUESTION 3

You discover that VM3 does NOT meet the technical requirements.

You need to verify whether the issue relates to the NSGs.

What should you use?

A. Diagram in VNet1

B. the security recommendations in Azure Advisor

C. Diagnostic settings in Azure Monitor

D. Diagnose and solve problems in Traffic Manager Profiles

E. IP flow verify in Azure Network Watcher

Correct Answer: E

Scenario: Contoso must meet technical requirements including:

Ensure that VM3 can establish outbound connections over TCP port 8080 to the applications servers in the Montreal

office.

IP flow verify checks if a packet is allowed or denied to or from a virtual machine. The information consists of direction, protocol, local IP, remote IP, local port, and remote port. If the packet is denied by a security group, the name of the rule

that denied the packet is returned. While any source or destination IP can be chosen, IP flow verify helps administrators quickly diagnose connectivity issues from or to the internet and from or to the on-premises environment.

QUESTION 4

You have an Azure subscription named Subscription1.

You enable Azure Active Directory (AD) Privileged Identity Management.

From Azure AD Privileged Identity Management, you configure the Global Administrator role for the Azure Active Directory (Azure AD) tenant as shown in the Role settings exhibit. (Click the Exhibit tab.)

Activations

Maximum activation duration (hours) ⓘ

| 4 |

Notifications

Send email notifying admins of activation ⓘ

| Enable | **Disable** |

Incident/Request ticket

Require ncident/request ticket number during activation ⓘ

| Enable | **Disable** |

Multi-Factor Authentication

Require Azure Multi-Factor Authentication for activation ⓘ

| Enable | Disable |

Require approval

Require approval to activate this role ⓘ

| Enable | **Disable** |

> ⓘ If no approvers are selected, Privileged Role Administrators will be approvers by default.
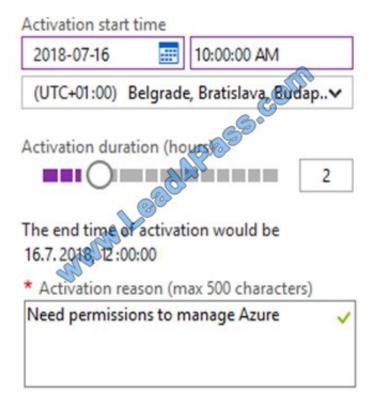

SELECTED APPROVER	ACTION

No results.

From Azure AD Privileged Identity Management, you configure the global administrators as shown in the Members exhibit. (Click the Exhibit tab.)

MEMBER	EMAIL	ASSIGNMENT TYPE	EXPIRATION	
Adatum Ltd	sk180606@outlook.com	Permanent	-	...
User2	User2@sk180606outlook...	Eligible	-	

User2 activates the Global Administrator role on July 16, 2018, at 10:00, as shown in the Activation exhibit. (Click the Exhibit tab.)

☑ Custom activation start time

Activation start time

| 2018-07-16 | 🗓 | 10:00:00 AM |

(UTC+01:00) Belgrade, Bratislava, Budap.. ▾

Activation duration (hours)

■■■ ⬤ ■■■■■■■■ `2`

The end time of activation would be
16.7.2018, 12:00:00

* Activation reason (max 500 characters)

Need permissions to manage Azure ✓

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
User2 will be a global administrator on July 16, 2018 at 11:00.	◯	◯
When User2 attempts to activate the Global Administrator role, the request will activate automatically.	◯	◯
User2 must use multi-factor authentication to activate the Global Administrator role.	◯	◯

Correct Answer:

Answer Area

Statements	Yes	No
User2 will be a global administrator on July 16, 2018 at 11:00.	◯	◯
When User2 attempts to activate the Global Administrator role, the request will activate automatically.	◯	◯
User2 must use multi-factor authentication to activate the Global Administrator role.	◯	◯

QUESTION 5

You need to create a web app named corp7509086n2 that can be scaled horizontally. The solution must use the lowest possible pricing tier for the App Service plan. What should you do from the Azure portal?

A. Check the answer in explanation.

Correct Answer: A

See below.

Step 1:

In the Azure Portal, click Create a resource > Web + Mobile > Web App.

Step 2:

Use the Webb app settings as listed below.

Web App name: corp7509086n2

Hosting plan: Azure App Service plan

Pricing tier of the Pricing Tier: Standard

Change your hosting plan to Standard, you can\'t setup auto-scaling below standard tier.

Step 3:

Select Create to provision and deploy the Web app.
