**QUESTION 1**

**HOTSPOT**

You have an SAP development landscape on Azure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

	Yes	No
You can use SAP Landscape Management (LaMa) to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input type="radio"/>
You can use SAP Solution Manager to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input type="radio"/>
You can use SAP HANA Cockpit to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

	Yes	No
You can use SAP Landscape Management (LaMa) to automate stopping, starting, and deallocating SAP virtual machines.	<input checked="" type="radio"/>	<input type="radio"/>
You can use SAP Solution Manager to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input checked="" type="radio"/>
You can use SAP HANA Cockpit to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input checked="" type="radio"/>

**QUESTION 2**

This question requires that you evaluate the underlined text to determine if it is correct.

You have an SAP environment on Azure that uses Microsoft SQL server as the RDBMS.

You plan to migrate to an SAP HANA database.

To calculate the amount of memory and disk space required for the database, you can use SAP Quick Sizer.

Instructions: Review the underlined text, If the makes the stamen correct, select "No change is needed." if the statement is incorrect select the answer choice that makes the statement correct.

- A. No change is needed.
- B. Azure Migrate
- C. /SDF/HDB\_SIZING
- D. SQL Server Management Studio (SSMS)

Correct Answer: C

If you want to move an existing deployed system from another relational database management system (RDBMS) to HANA. SAP provides reports to run on your existing SAP system. If the database is moved to HANA, these reports check

the data and calculate memory requirements for the HANA instance.

/SDF/HDB\_SIZING is a standard Executable ABAP Report available within your SAP system (depending on your version and release level).

ABAP code listing snippet for SAP ABAP Report /SDF/HDB\_SIZING \*and-----\*

```
*and Report /SDF/HDB_SIZING // ZNEWHDB_SIZE
```

```
*and
```

```
*and-----*
```

```
*and Estimates the memory requirement in HANA of non-HANA databases * *and When run on HANA, size the database using real memory consumption *and values.
```

```
*and-----*
```

```
*
```

```
*
```

```
REPORT /SDF/HDB_SIZING LINE-SIZE 101 LINE-COUNT 90 NO STANDARD PAGE HEADING.
```

```
DATA: l_version TYPE c LENGTH 6 VALUE '\\54\\'. "54.2 TYPES: ty_para(2) TYPE n,
```

```
ty_top(3) TYPE n.
```

```
TYPE-POOLS: abap.
```

```

### QUESTION 3

#### DRAG DROP

You have an SAP environment on Azure.

You use Azure Recovery Services to back up an SAP application server.

You need to test the restoration process of a file on the server.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Download and run the mount disk executable	
From Azure Cloud Shell, run the <code>Get-AzBackupItem</code> cmdlet	
From Azure Recovery Vault, select <b>File Recovery</b>	
Recover the file and unmount the disk	
From Azure Cloud Shell, run the <code>Get-AzBackupRecoveryPoint</code> cmdlet	 

Correct Answer:

## Actions

From Azure Cloud Shell, run the `Get-AzBackupItem` cmdlet

From Azure Cloud Shell, run the `Get-AzBackupRecoveryPoint` cmdlet

## Answer Area

From Azure Recovery Vault, select **File Recovery**

Download and run the mount disk executable

Recover the file and unmount the disk

Step 1: From Azure Recover Vault, select File Recovery To restore files or folders from the recovery point, go to the virtual machine and choose the desired recovery point. Step 2: Download and run the mount disk executable Step 3: recover the file and unmount the disk

## File Recovery

v2win2012r2

✓ **Step 1: Select recovery point**

7/20/2017, 1:36:40 PM [Latest] (AppCo... ▼)

---

→ **Step 2: Download script to browse and recover files**

This script will mount the disks from the selected recovery point **as local drives on the machine where it is run**. These drives will remain mounted for 12 hours.

[Download Executable \\*](#)

**Requires password to run**

---

→ **Step 3: Unmount the disks after recovery**

Unmount disks and close the connection to the recovery point.

[Unmount Disks](#)

---

\* Run this script on the machine where you want to copy the files  
\* To restore files larger than 10GB, [restore entire VM to an alternate location](#) or [restore disks using PowerShell](#)  
\* Data transfer rate: up to 1GB/Hr

#### QUESTION 4

You plan to migrate an SAP ERP Central Component (SAP ECC) production system to Azure.

You are reviewing the SAP EarlyWatch Alert report for the system.

You need to recommend sizes for the Azure virtual machines that will host the system.

Which two sections of the report should you review? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Hardware Capacity
- B. Patch Levels under SAP Software Configuration
- C. Hardware Configuration under Landscape
- D. Database and ABAP Load Optimization
- E. Data Volume Management

Correct Answer: AC

## QUESTION 5

### HOTSPOT

You deploy an Azure Internal load balancer.

You deploy a node of an SAP NetWeaver 7.4 ABAP system named SP1.

You plan to deploy a second node.

You need to verify that the health probe port is configured for the cluster. The cluster IP address resource name is SAP SP1 IP.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

	▼
Get-ClusterResource	
Get-ClusterGroup	
Get-ClusterNetwork	
Get-ClusterLog	
Get-ClusterParameter	

"SAP SP1 IP" |

	▼
Get-ClusterResource	
Get-ClusterGroup	
Get-ClusterNetwork	
Get-ClusterLog	
Get-ClusterParameter	

Correct Answer:

Answer Area

	▼
Get-ClusterResource	
Get-ClusterGroup	
Get-ClusterNetwork	
Get-ClusterLog	
Get-ClusterParameter	

"SAP SP1 IP" |

	▼
Get-ClusterResource	
Get-ClusterGroup	
Get-ClusterNetwork	
Get-ClusterLog	
Get-ClusterParameter	

Box 1: Get-ClusterResource Example: Get-ClusterResource -Name \$SAPIResourceName | Get-ClusterParameter

Write-Output " "

Write-Output "Current probe port property of the SAP cluster resource \\\$SAPIResourceName\\ is \\\$OldProbePort\\".

Write-Output " "

Write-Output "Setting the new probe port property of the SAP cluster resource \\\$SAPIResourceName\\ to \\\$ProbePort\\ ..."

Write-Output " "

Box 2: Get-ClusterParameter
