### QUESTION 1

You are expanding an existing on-premises application to connect to several applications in the cloud. You have the following requirements:

Automate various business processes and send data to multiple SaaS and Use workflows and a publish-subscribe model

Prohibit changes to the on-premises application

You need to create a solution.

What should you use?

- A. Azure Service Bus
- B. Azure Web Apps
- C. Logic Apps with Azure Event Grid
- D. Azure Service Fabric

Correct Answer: C

---

### QUESTION 2

#### DRAG DROP

A company backs up all manufacturing data to Azure Blob Storage. Admins move blobs from hot storage to archive tier storage every month.

You must automatically move blobs to Archive tier after they have not been accessed for 180 days.

The path for any item that is not archived must be placed in an existing queue.

This operation must be performed automatically once a month. You set the value of TierAgeInDays to 180.

How should you configure the Logic App? To answer, drag the appropriate triggers or action blocks to the correct trigger or action slots. Each trigger or action block may be used once, more than once, or not at all. You may need to drag the

split bar between panes or scroll to view content

NOTE: Each correct selection is worth one point.

Select and Place:

### Triggers and Action Blocks

**Insert Entity**

\*Table: processing

\*Entity: Path

Show advanced options

**Tier blob**

If blob is older than the defined value, tier it to Cool or Archive tier

\*Blob path: Path

\*Blob Tier: Archive

**When there are messages in a queue**

\*Queue Name: processing

Show advanced options

Connected to tableStorageAccountConnection. Change connection.

**Recurrence**

\*Interval: 1

\*Frequency: Month

Show advanced options

### Answer Area

↓

{x} Set tier age variable

↓

Set tier age variable

↓

For each

Scan all blobs in this folder

Select an output from previous steps

↓

**When there are messages in a queue**

\*Queue Name: processing

Show advanced options

Connected to tableStorageAccountConnection. Change connection.

✓ If true

↓

✗ if false

### QUESTION 3

You need to ensure the security policies are met. What code do you add at line CS07?

- A. -PermissionsToKeys create, encrypt, decrypt
- B. -PermissionsToKeys wrapkey, unwrapkey, get
- C. -PermissionsToCertificates wrapkey, unwrapkey, get
- D. -PermissionsToCertificates create, encrypt, decrypt

A. B. C. D.

Correct Answer: D

#### QUESTION 4

##### DRAG DROP

You have a web app named MainApp. You are developing a triggered App Service background task by using the WebJobs SDK. This task automatically invokes a function in the code whenever any new data is received in a queue.

You need to configure the services.

Which service should you use for each scenario? To answer, drag the appropriate services to the correct scenarios. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to

view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

## QUESTION 5

Note: This question is part of a series of questions that present the same scenario solution meets the stated goals. You have the following resource groups:

Resource group	Comments
DevServer_WestCentralUS	<p>This resource group is located in the West Central US region and contains a single virtual machine named DevServer.</p> <p>DevServer is connected to a private subnet in an Azure Virtual Network that has no internet access.</p>
Workstation_EastUs	<p>This resource group is located in the East US region and contains a virtual machine named DevWorkstation.</p> <p>DevWorkstation is connected to a subnet in a Virtual Network and is configured with a public IP address. A network security group has been configured to allow public incoming remote desktop protocol (RDP) connections to the DevWorkstation.</p>

Developers must connect to DevServer only through DevWorkstation. To maintain security, DevServer must not accept connections from the internet. You need to create a private connection between the DevWorkstation and DevServer.

Solution: Configure a public IP address on DevServer\_WestCentral. Configure the Network Security Group to allow all incoming ports.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B
