QUESTION 1

An app uses a virtual network with two subnets. One subnet is used for the application server. The other subnet is used for a database server. A network virtual appliance (NVA) is used as a firewall.

Traffic destined for one specific address prefix is routed to the NVA and then to an on-premises database server that stores sensitive data. A Border Gateway Protocol (BGP) route is used for the traffic to the on-premises database server.

You need to recommend a method for creating the user-defined route.

Which two options should you recommend? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. For the virtual network configuration, use a VPN.

B. For the next hop type, use virtual network peering.

C. For the virtual network configuration, use Azure ExpressRoute.

D. For the next hop type, use a virtual network gateway.

Correct Answer: AC
