QUESTION 1

In Kerberos authentication that uses BCAAA, which two entities negotiate the shared key that is used during the authentication? (Select 2)

- A. BCAAA
- B. The domain controller
- C. The client
- D. The origin content server
- E. The ProxySG

Correct Answer: AB

QUESTION 2

Which statement best describes the payload that is encapsulated by GRE (Generic Routing Encapsulation) protocol and what layer GRE uses for delivery

- A. GRE sends IP payload over IP
- B. GRE sends either TCP or UDP payload over IPsec
- C. GRE sends IP payload over data link layer

Correct Answer: A

QUESTION 3

If a user can not be derived through the Window SSO realm, then the client will .

- A. be prompted with an authentication dialog box to provide credentials.
- B. receive an authentication error from the proxy.
- C. proceed as an unauthenticated user.
- D. receive an authentication form from the proxy to provide credentials.

Correct Answer: C

QUESTION 4

Which one of these statements is NOT true about the ProxySG object cache?

- A. It is stored as a hash table, not a traditional filesystem.

- B. The first chunk of any object can be retrieved in a single disk-read operation.
- C. Objects with similar URLs are usually located next to each other so that accessing related objects in a sequence is faster.
- D. Performance does not deteriorate when the cache is 100% full.

Correct Answer: D

QUESTION 5

When analyzing an authentication error, which of these diagnostic tools provides the most detailed information about the protocol-level messages among the client, the ProxySG, and the authentication server?

- A. Packet captures
- B. Policy traces
- C. Access logs
- D. Event logs

Correct Answer: C
