QUESTION 1

Which of the following test design techniques could be used to do this?

- a.
Statement testing.
 - b.
Path testing.
 - c.
State transition testing.
 - d.
Exploratory testing.
- A.
a and c.
- B.
b and c.
- C.
c and d.
- D.
a and d.

Correct Answer: C Case Study# 5Scenario

A rail services provider is upgrading its signalling systems, to allow train drivers and signallers to communicate securely and timely.

This is seen as a safety critical system. The IT processes in place include many quality check points, including the use of the V-model for software development.

The provider has recently lost many of its software development and test staff to other organizations. The management staff has been retained, including the project and development manager for this upgrade. A recruitment drive is underway.

You have been brought in as a new test manager, and you have been asked to review the processes surrounding development and testing.

The project manager has been asked about a formal process of building test procedures using specification-based techniques.

QUESTION 2

Which of the following provides the best example of a product risk leading to a project risk?

- A. The signalling systems may have more defects than anticipated, leading to the need for more retesting to be carried out.
- B. There may be unexpected lags on the network traffic communication, causing drivers to slow the trains down unnecessarily.
- C. The new development staff may require training for this type of system, which, if not carried out, may lead to an increase in the number of defects introduced.
- D. The budget may need to be increased significantly during the project, otherwise there may be delays in the delivery of the system.

Correct Answer: A

QUESTION 3

Which stage of the Fundamental Test Process will be most affected by the use of user-stories as defined above?

- A. Creating a schedule of activities as part of test planning.
- B. Creating test cases as part of test design.
- C. Creating the test environment as part of test execution.
- D. Assessing requirements coverage at the end of each Sprint.

Correct Answer: B

QUESTION 4

Which of the following is the main purpose of an incident tracking process?

- A. To identify the average number of steps required to recreate each incident.
- B. To calculate the average turnaround times per defect.
- C. To identify the priority of each incident.
- D. To understand the status of each incident at any given time.

Correct Answer: D

Case Study # 3**Scenario**

Data is transmitted over the internet as a series of packets. Each packet is sent to its destination via the best available route. The decision on the best available route is made by a series of routers on the internet.

In order to make the best decision on the route to take, the router:

1) Scans the destination address and matches it against rules set up in a configuration table. 2) Checks the performance of the primary connection to see if it is good enough to send the packet. If not,

it seeks an alternative.

Routers handle many millions of packets being sent at the same time. Packets can take the form of email messages, data files etc.

QUESTION 5

Which of the following would be applicable as part of a test policy for testing these types of systems?

a.

Systems must be tested for compliance to industry standard routing protocols.

b.

Testing for the latest upgrade will require testing of increased network traffic of 100%.

c.

Testing for the fix will require the use of dynamic analysis tools.

d.

Releases will not be made if systems have any high priority defects outstanding.

A.

a and b.

B.

a and d.

C.

b and c.

D.

b and d.

Correct Answer: B
