QUESTION 1

DRAG DROP

What is the correct order of steps to create an Integration Service from scratch?

Select and Place:

Unordered Options

- Click File > New > Integration Service
- Enter a name for the integration service and optionally, a description.
- Specify where the interface definition will be stored (inline or shared library)
- Specify how the interface for the integration service will be defined and select 'Define it myself' using the integration service editor

Ordered Options

Correct Answer:

Unordered Options

Ordered Options

- Click File > New > Integration Service
- Enter a name for the integration service and optionally, a description.
- Specify how the interface for the integration service will be defined and select 'Define it myself' using the integration service editor
- Specify where the interface definition will be stored (inline or shared library)

To create an integration service by defining a new interface, complete the following steps:

Procedure

- Open the New Integration Service wizard by using one of the following methods:
 - Click File > New > Integration Service.
 - In the Application Development view, click New > Start by creating an integration service.
 - Right-click the white space of the Application Development view then click New > Integration Service.
 - Enter a name for the integration service, and optionally a description.
 - To specify how you want to define the interface for your integration service, select Define it myself using the integration service editor.
 - Specify where you want to store your interface definition.
 - If the definition will be used by this integration service only, store the definition in the integration service project.
 - If the definition might be used by multiple integration services, store the definition in a shared library.
-

QUESTION 2

What is one reason to organize resources into applications?

- A. It enables all processes using the module to reference the latest versions
- B. It enables the ability to reference the resources in an Integration Project
- C. It allows for Java and ESQL support in the same message flow
- D. It provides runtime isolation of resources

Correct Answer: D

QUESTION 3

Which editor are the global cache values defined and retrieved from?

- A. Graphical Data Mapping
- B. Message Flow Mapping
- C. Integration Data Mapping
- D. Message Data Mapping

Correct Answer: A

https://www.ibm.com/support/knowledgecenter/SSMKHH_10.0.0/com.ibm.etools.mft.doc/br26106_.htm

QUESTION 4

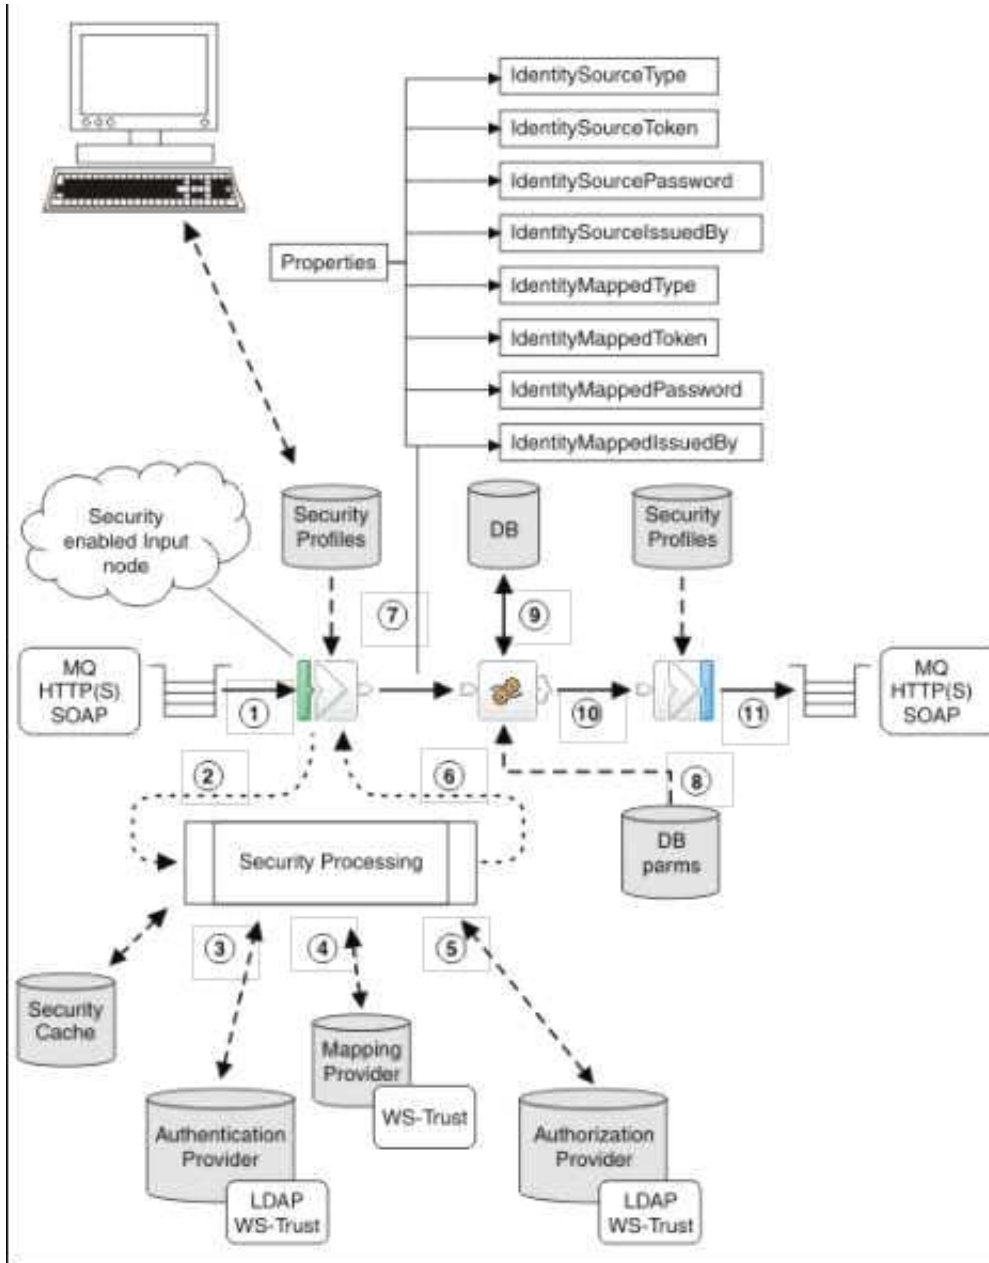

HOTSPOT

The message flow security manager can be invoked by configuring a security enabled input node.

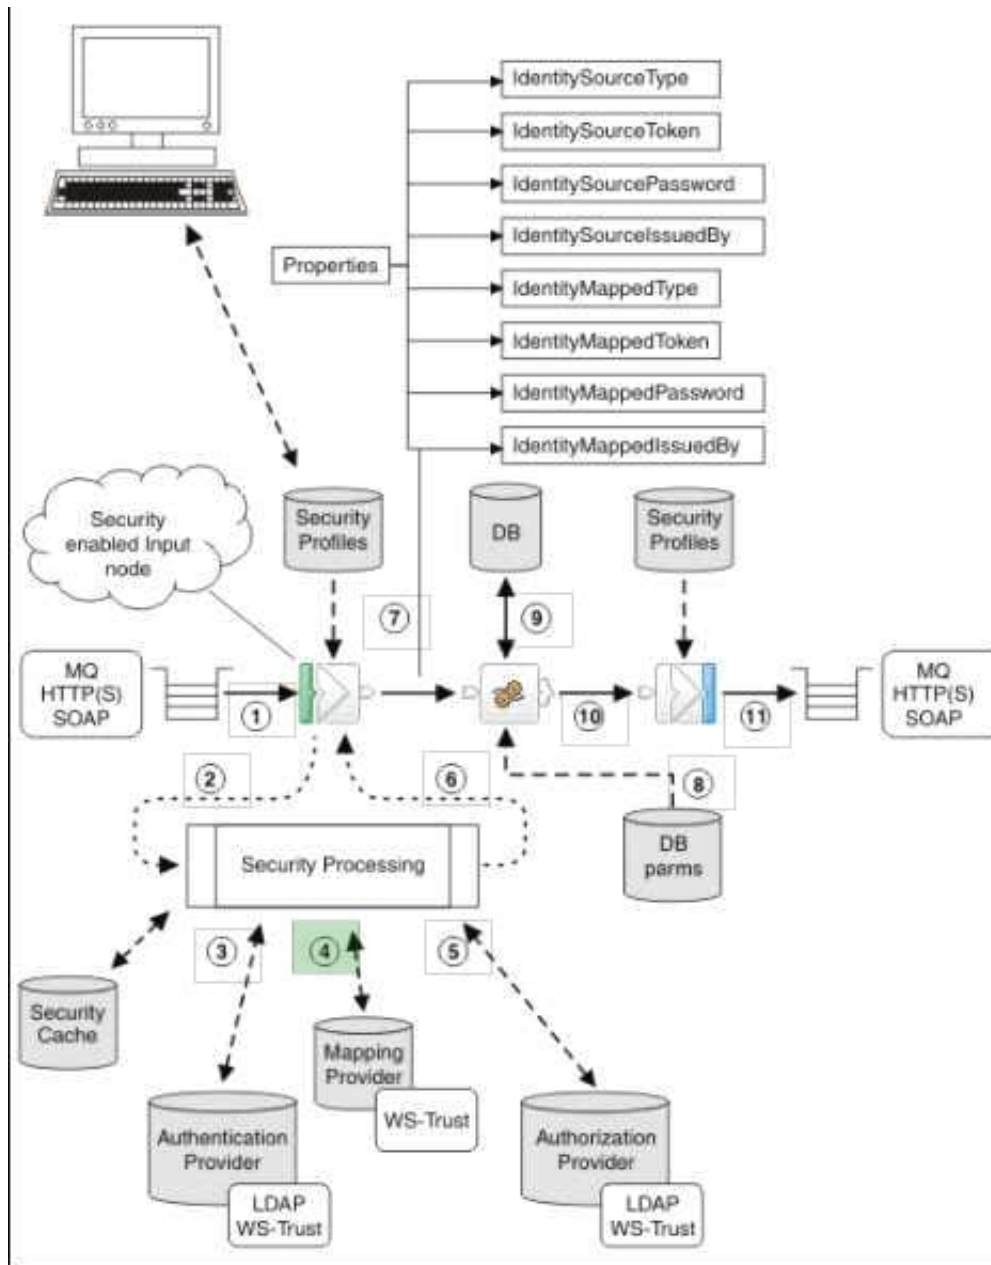

The following diagram shows an example message flow and gives an overview of the sequence of events that occur when an input message is received by a security enabled input node in the message flow. Select the number that would

interact with LDAP.

Hot Area:

Correct Answer:

QUESTION 5

A solution developer sets the maximum rate for a message flow to 100 messages per second. What is this rate evaluated across?

- A. All instances of all input node types.
- B. Each instance of all input node types.
- C. Each instance of each input node type.
- D. All instances of each input node type.

Correct Answer: A
