QUESTION 1

What is a key difference between the total function and the aggregate function?

- A. The aggregate function can only summarize within a set, and the total function can accept separate members.
- B. The aggregate function is dimensional, and the total function is relational.
- C. The aggregate function will summarize only the current measure, and the total function will summarize any specified measure.
- D. The aggregate function follows the rollup rules of the measure defined in the data source, and the total function adds the total of the specified measure.

Correct Answer: D

QUESTION 2

The sales manager requires a crosstab report to display the top 3 sales people for the month. Considering that an OLAP data source is used, what will the report author use when creating this report?

- A. A set expression
- B. An axis title
- C. A percent of base calculation
- D. The hierarchize function

Correct Answer: A

QUESTION 3

A report author creates a report with a drill-through definition. In the target report the parameter expression is "->?P?".

What type of data must be passed to the parameter?

- A. A member from the level
- B. Any member from the hierarchy
- C. A value
- D. A business key from the level

Correct Answer: A

QUESTION 4

When must a report author use the caption function?

- A. As the first parameter of the roleValue function.
- B. To return the display name for the specified business key.
- C. To see the string display name for the specified element.
- D. To pass the returned value to a drill-through target report, this expects a matching string as a parameter value.

Correct Answer: D

QUESTION 5

Which statement is true about MUNs?

- A. They are used to define roll-up properties in a hierarchy.
- B. They are used to retrieve members from the data source.
- C. They change each time the package is published.
- D. They are used to retrieve levels from the data source.

Correct Answer: B
