QUESTION 1

Elaine wants to use the "webkit" stylesheet for webkit browsers. Which object will enable her to do this?

- A. `facesContext.getExternalContext().getRequest().getHeader("User-Agent")`
- B. `facesContext.getExternalContext().getContext().getHeader("User-Agent")`
- C. `facesContext.getRequest().getHeader("User-Agent")`
- D. `facesContext.getExternalContext().getHeader("User-Agent")`

Correct Answer: A

QUESTION 2

John wishes to add a managed bean to his application. In order to do this he must do which of the following:

- A. Create a file called `xpages-config.xml` within his application and define the managed bean within the file using the appropriate syntax.
- B. Create a JavaBean class and add the Java class as a page resource to the XPage where the managed bean is to be used.
- C. Open the pre-existing `faces-config.xml` file located at `WebContent\WEB-INF\faces-config.xml` and add the appropriate markup to the file.
- D. Open the pre-existing `xpages-config.xml` file located at `WebContent\WEB-INF\xpages-config.xml` and add the appropriate markup to the file.

Correct Answer: C

QUESTION 3

Peter wants to enhance the view controls used in his application so that they can display rich content from the underlying document collection. He wants to do this in an efficient manner as the application has thousands of documents and is accessed by hundreds of concurrent users. Which of the following approaches should John take to add this enhancement to his application most efficiently?

- A. Modify the Domino view to include the rich text field and add a new column to his view controls that automatically binds to this field.
- B. Add a computed column to the view control that opens each document, set the column content type to HTML, and bind the rich text content from each document using JavaScript code.
- C. Add an action to each column that will retrieve the rich text content from the underlying document when clicked, assign it to a computed field with content type set to HTML, and then display that field.
- D. Nothing - XPages view controls cannot display rich content.

Correct Answer: C

QUESTION 4

Tim has an XPage containing an Edit Box. He has read that it is possible to use the Dojo Toolkit NumberSpinner control in XPages, and he wishes to modify his XPage so that the Edit Box will appear as a Number Spinner in the browser. What would the steps be to accomplish this?

- A. From the Dojo Toolkit Website, get the URL to the most recent version of the NumberSpinner.js control (where the URL begins with http://). In the XPage, in the Resources tab of the Properties view, add a JavaScript Library using that URL. Configure the Edit Box to set the dojoType to "dijit.form.NumberSpinner".
- B. Import the NumberSpinner.js file from Dojo into the application as a JavaScript Library. In the XPage, in the Resources tab of the Properties view, add a JavaScript Library resource for that NumberSpinner.js file to the XPage. Configure the Edit Box to set the dojoType to "dijit.form.NumberSpinner".
- C. Import the NumberSpinner.js file from Dojo into the application as a Dojo Module. In the XPage, in the Resources tab of the Properties view, add that Dojo Module resource for that NumberSpinner.js file to the XPage. Configure the Edit Box to set the dojoType to "dijit.form.NumberSpinner".
- D. In the XPage, in the Resources tab of the Properties view, add a Dojo Module resource for "dijit.form.NumberSpinner" to the XPage. Configure the Edit Box to set the dojoType to "dijit.form.NumberSpinner".

Correct Answer: D

QUESTION 5

Dominic wants to implement the open source CSS framework called Blueprint in his XPages application. He does not want to include any other CSS framework resources which may exist on the Domino server. What is the best way to include all of the required CSS files in the XPages in his application?

- A. In each XPage in the application add the required CSS files to the Resources section
- B. Create a new theme which extends webstandard and then add each Blueprint CSS file via a resource definition
- C. Create a new theme which extends oneui and then add each Blueprint CSS file via a resource definition
- D. Create a new theme which does not have an extension property and then add each Blueprint CSS file via a resource definition

Correct Answer: D
