### QUESTION 1

Marco has built an XPage that has increased in complexity over time and now contains several hundred lines of XSP markup, with many postback actions that conditionalize the display of the page. He feels that the page does not perform well and is looking to improve the responsiveness for the end-user. He is considering the following actions to improve performance. All of the following actions may improve performance EXCEPT which one:

- A. Reduce the size of the page by splitting it up into several custom controls wherever possible.
- B. Use Partial Refresh to conditionally redraw only those parts of the page impacted by postback actions.
- C. Conditionally set the "loaded" property to "true" for controls and data sources that are displayed, and "false" when they are hidden.
- D. Use scoped variables to store/retrieve data that will not change between postback requests.

Correct Answer: A
