**QUESTION 1**

Which one of the following statements about an Authors field is true?

- A. Groups can be used. If individual names are used, they must be stored in Abbreviated format.
- B. Groups and roles can be used. Individual names should be stored in Abbreviated format if the application will be used in multiple domains.
- C. Roles can be used. If individual names are used, they must be stored in Canonical format.
- D. Groups and roles can be used. Individual names should be stored in Canonical format if the application will be used in multiple domains.

Correct Answer: D

---

**QUESTION 2**

Menno has hidden the design of a database and finds out later that most of the design elements have the "prohibit design refresh or replace to modify this element" flag set.

How can he undo this?

- A. He cannot; hidden design is hidden forever.
- B. He can simply replace the design with a blank template, and then replace again with the corrected template.
- C. He needs to go into the design and untag each and every element manually, and then simply replace the design with the updated (new) template once more to update with the last changed.
- D. He needs to create an agent that uses the LotusScript Design classes to remove every design element in the database , and afterward use the corrected template to replace the whole design once more.

Correct Answer: D

---

**QUESTION 3**

Which of the following is a benefit of HTML rendering in lotus Domino?

- A. Allows writing of HTML for different clients without recoding
- B. Allows saving HTML with errors
- C. Prevents saving XML with errors
- D. Allows easy conversion of XML to HTML

Correct Answer: A

---

## QUESTION 4

Nathan created a secret key named Salary, and he has enabled encryption for three fields on the SalaryHistory form. He wants to ensure that all three of these fields are always encrypted whenever a SalaryHistory document is saved.

What should Nathan do next?

- A. From the Field properties for each of the three fields, select Salary under "Encryption key(s)". Select the name of each of the individuals needing access to the field and save the form.
- B. From the basics tab of the database properties, click encryption Settings. Select "Automatic encryption". Mail the secret key to the individuals who need access to the encrypted fields.
- C. From the Security tab of the Form properties, select salary under "default encryption keys". Save the form, and mail the secret key to the individuals who need access to the encrypted fields.
- D. From the Security tab of the Form properties, select "Default encryption". Mail the secret key to a Notes administrator and request the key to be merged into the certificate on the person document of each user needing access to the encrypted fields.

Correct Answer: C

---

## QUESTION 5

Joe wants to store JavaScript code in his forms so that the code can be called from other events on the form.

Where should he put the code?

- A. In the form's onLoad event.
- B. In the form's HTML Body Attributes event.
- C. In the form's JS Global Functions event.
- D. In the form's JS Header event.

Correct Answer: D
