QUESTION 1

An organization is using the Service Builder to create a service for transforming data from one format to the other (EDI to XML). However, they are unable to do so as they encounter errors while trying to save the service. Which two options may be responsible for this?

- A. A transport node is missing.
- B. A component node is missing.
- C. An API component exists without System Arguments specified.
- D. An API component exists without the template file name specified.
- E. All required properties on all nodes and links do not have values specified.

Correct Answer: BE

QUESTION 2

What are the three valid statuses that can be used in a Value-Added Services (VAS) pipeline?

- A. Created
- B. Included
- C. Released
- D. Cancelled
- E. Completed
- F. Scheduled

Correct Answer: ADE

QUESTION 3

All of the items that are part of orders being shipped need to be picked from the storage location and packed to be made ready for shipping. To achieve this, users need to be notified at least 12 hours before the Requested Shipment Date of an order. Which approach will help accomplish this?

- A. Configure a status monitor for the shipped?status which will invoke the appropriate action before 12 hours.
- B. Configure an order monitor for the appropriate pipeline which will raise the alert 12 hours before the Requested Ship Date.
- C. Configure the Exception Type to be raised 12 hours before the order is shipped under Applications Manager > Applications > ApplicationPlatform > Alert.
- D. Configure the Alert Queue to raise the alert 12 hours before the order is shipped under Applications Manager >

Applications > ApplicationPlatform > Queue Management.

Correct Answer: B

QUESTION 4

A company wants to set up its business processes to monitor orders that have not been released 24 hours before their requested shipment date and, raise alerts for such orders. Assume that they have configured the necessary monitor rule components, including milestones, date types, and alert consolidation rules for the process type they are working with. Which monitoring rule type should be defined to handle this scenario?

- A. Has been in a status
- B. Milestone has not reached before a date
- C. Milestone has reached before a date
- D. Milestone has not reached after a date

Correct Answer: B

QUESTION 5

A retailer wants to have different process flows for orders created online and from their stores. How can this efficiently be achieved?

- A. Create separate document types for online and store orders.
- B. Configure a hub rule that will move online and store orders to different pipelines.
- C. Implement the YFSVerifyOrderUE to check for the different modes of order capture.
- D. Pass different values for the '\\Channel\\' attribute in the input and distinguish the two in the ON_SUCCESS event of createOrder API.

Correct Answer: B
