## QUESTION 1

Which statement is true?

- A. Complex Boolean survivorship rules are permitted.
- B. The first defined survivorship rule takes precedence.
- C. Complex fuzzy matching survivorship rules are permitted.
- D. Blank fields are automatically dropped from survivorship consideration.

Correct Answer: B

---

## QUESTION 2

In the output fields available from the Name Standardize rule set, how many MatchPrimaryWords are defined?

- A. Two
- B. Three
- C. Four
- D. Five

Correct Answer: A

---

## QUESTION 3

A client's data has information from several source systems combined into a single input file. The data needs to be matched within source system and all data must be retained. There is a field present in the data which identifies the source system.

Which approach would best accomplish this task?

- A. Pass all the data into a Match One-source stage blocking on the Source System field.
- B. Pass all the data into a Remove Duplicates stage and process the remaining data into an One- source match blocking on the Source System field.
- C. Separate the data by source system using a Filter stage, pass each sources system's data through an One-source match and match on the Source System field.
- D. Sort the data by source system, pass the data through a Remove Duplicates stage and pass the data to a Two-source match stage blocking on the Source System field.

Correct Answer: A

---

## QUESTION 4

Which statement is true regarding Quality Stage data survivorship?

- A. Survivorship is used to create groups of duplicate records.
- B. The Survive stage is used to mark records as possible duplicates.
- C. The Survive stage is used after matched record groups have been identified.
- D. The Survive stage can be used to correct and identify unhandled data from the Standardize stage.

Correct Answer: C

---

## QUESTION 5

You created a job that uses the standardization stage with a new copy of USADDR rule set. The job was successfully compiled, but has an error and will not run.

What is most likely the cause of the problem?

- A. The input file is missing.
- B. The rule set is not provisioned.
- C. The server does not have enough memory.
- D. The rule set has an invalid statement in the pattern file.

Correct Answer: C
