QUESTION 1

A table named STATES was created as follows:

```
CREATE TABLE states  
(state_cd CHAR(2) NOT NULL,  
state_desc CHAR(20));  
CREATE UNIQUE INDEX ndx1 ON states (state_cd);
```

If the following ALTER statement is executed:

```
ALTER TABLE states ADD PRIMARY KEY (state_cd);
```

What will happen?

- A. An error will be returned and the operation will fail.
- B. A warning will be returned and the unique index INDX1 will become the index for the primary key.
- C. The primary key will be successfully added and the unique index INDX1 will be dropped and recreated as the primary key index.
- D. The primary key will be successfully added, the unique index INDX1 will be dropped, and a new index will be created for the primary key.

Correct Answer: B

QUESTION 2

Which statement is valid about the Row and Column Access Control (RCAC) feature?

- A. A row mask's access control rule is defined by an SQL CASE expression; a column permission's access control rule is defined by an SQL search condition.
- B. A row permission's access control rule is defined by an SQL CASE expression; a column mask's access control rule is defined by an SQL search condition.
- C. A row mask's access control rule is defined by an SQL search condition; a column permission's access control rule is defined by an SQL CASE expression.
- D. A row permission's access control rule is defined by an SQL search condition; a column mask's access control rule is defined by an SQL CASE expression.

Correct Answer: D

QUESTION 3

What is the primary purpose for using the INCLUDE clause with a CREATE UNIQUE INDEX statement?

- A. To override the limit on index key columns.
- B. To further enforce the uniqueness of index values.
- C. To combine two or more indexes to create a single unique index.
- D. To improve performance of some queries by allowing index-only access.

Correct Answer: D

QUESTION 4

What type of large object (LOB) is used to store LOB data together with the formatted rows on data pages, instead of in a separate LOB storage object?

- A. inline
- B. binary
- C. internal
- D. partitioned

Correct Answer: A

QUESTION 5

If no isolation level is specified, what is the default isolation level used?

- A. Cursor Stability (CS)
- B. Repeatable Read (RR)
- C. Read Stability (RS) with Currently Committed semantics
- D. Cursor Stability (CS) with Currently Committed semantics

Correct Answer: A
