QUESTION 1

A company would like to distribute reports to users via an email address or a directory entry. How should the burst table be defined for this to work appropriately?

- A. Directory entries must not use the alternate path syntax.
- B. The burst table can be an uploaded file and contain as many columns as needed.
- C. The burst table must contain three columns (Recipient, Recipient type and Data item) to burst on.
- D. The directory entry can use either the alternate path syntax or the internal search path using the CAMID.

Correct Answer: D

QUESTION 2

An author has created a dashboard and added a filter. The author anticipated this filter to be applied to all visualizations on the dashboard but it was only on some of them.

Why did this happen?

- A. The local filter sync was not enabled.
- B. The global filters property was disabled.
- C. The filter was not created as a data set filter.
- D. The filter was not applied to the default visualization.

Correct Answer: C

QUESTION 3

Which statement is true about adding columns from the source package after modifying a query?

- A. Columns cannot be added from the source package to a report after adding an SQL object.
- B. Columns can be added from the source package to a report after modifying an SQL object.
- C. Columns cannot be added from the source package to a report after deleting an SQL object.
- D. Columns can be added from the source package to a report only before adding an SQL object.

Correct Answer: B

QUESTION 4

A report author creates the following filter in a report:

[Region] in (`Americas\`,\`Asia Pacific\`)

Which type of filter was created?

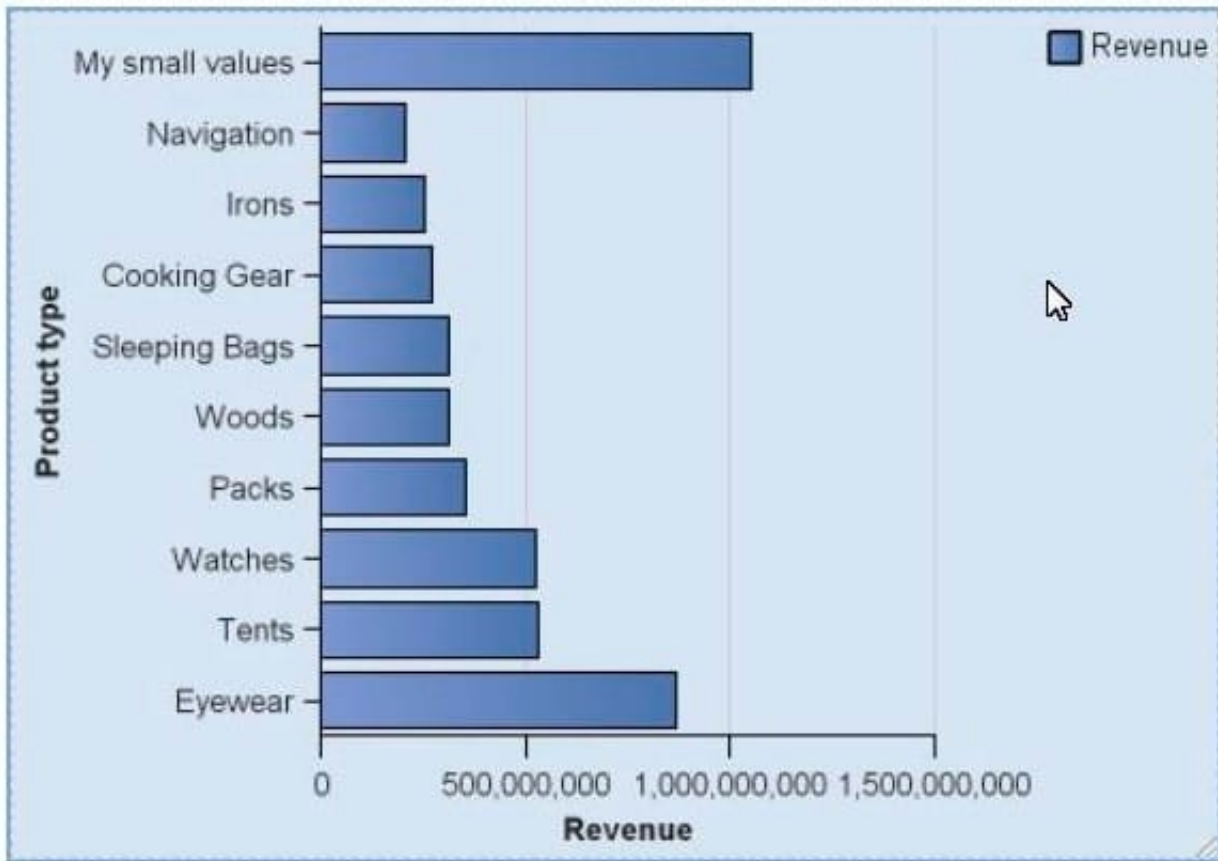

- A. Advanced
- B. Combined
- C. Parameterized
- D. Custom based on data item

Correct Answer: D

QUESTION 5

A customer wants to report the product types with the largest average revenue. In addition, the total revenue should be shown and all product types with revenue less than three percent (>3%) in a single bar.

Targeting this result: How can this be done?

- A. Using a visualization, because it is not possible in the default chart engine.
- B. Using the property "summarize small items" on the chart, the type total and setting the item label. Set the order on the default measure.
- C. Using the property "summarize small items" on the chart, the type average and setting the item label. Set the order on the chart node member.
- D. Writing a new query where you summarize the Product types and create a new "My small value" item based on the calculated average. Order the values in the query.

Correct Answer: B
