QUESTION 1

When installing and configuring a standby Content Manager, what must the administrator do to ensure failover?

- A. Configure the content store to know the location of all standby Content Managers.
- B. Install the first standby Content Manager on the machine with the highest processor speed.
- C. Ensure that services are started on the machines hosting the standby Content Managers before they are started on the machine hosting the default active Content Manager.
- D. Configure authentication providers the same way on all machines hosting Content Managers.

Correct Answer: D

QUESTION 2

When the default active Content Manager fails, which of the following occurs?

- A. The system automatically activates all standby Content Managers, and spreads the load of requests based on the Weighted Round Robin load balancing mode.
- B. The system automatically activates all standby Content Managers and spreads the load of requests across them all.
- C. The system automatically switches to a standby Content Manager, and requests are directed to it.
- D. Users are prompted to rerun failed requests on the initial Content Manager once it is back on line.

Correct Answer: C

There are 2 load balanced report servers.

The dispatcher on Computer X has the following characteristics:

RAM: 1024 MB
CPU: Dual P4 1.5 Ghz
Hard drive: 80 GB

The dispatcher on Computer Y has the following characteristics:

RAM: 2048 MB
CPU: Dual P4 3.8 Ghz
Hard drive: 80 GB

What would an administrator set the processing capacity on Computer Y to?

- A. 1
- B. 2

C. 4

D. 8

QUESTION 3

Which statement is true about the definition of the Application tier?

- A. The Application tier hosts the dispatcher and content manager that reside in a servlet container.
- B. The Application tier hosts the dispatcher, which includes the IBM Cognos Application Firewall and Access Manager.
- C. The Application tier hosts the BI server and the content store.
- D. The Application tier hosts the content manager, which contains data such as a report specification, IBM Cognos namespace, and so on.

Correct Answer: B

Below is a partial diagram of the processing that occurs when a user launches saved output in IBM Cognos Connection and views it in IBM Cognos Viewer.

At the level of the dispatcher, which of the IBM Cognos BI services is used to process the request?

- A. Report service
 - B. Presentation service
 - C. Batch report service
 - D. Delivery service
-

QUESTION 4

Before sending a report by email, where must the administrator specify the connection to the mail server?

- A. IBM Cognos Connection
- B. IBM Cognos Administration
- C. Framework Manager
- D. IBM Cognos Configuration

Correct Answer: D

QUESTION 5
