QUESTION 1

Which action must be completed for an external high volume runtime database after upgrading a Security Access Manager appliance?

- A. Drop the runtime database
- B. Restart the external database
- C. Recreate the configuration table
- D. Run the Access Control update.sql files

Correct Answer: B

QUESTION 2

An IBM Security Access Manager (ISAM) V9.0 deployment professional wants to implement some changes to the ISAM object space in the production environment. Before applying the changes, the ISAM object space needs to be exported and saved.

How should the ISAM deployment professional do this export?

- A. Use the REST API
- B. Use the LMI export panel
- C. Use the pdadmin command
- D. Use the Policy Administration (WPM)

Correct Answer: D

QUESTION 3

A part of installing a fixpack a deployment professional wants to back up the appliance configuration. How is this done?

- A. Click on the Create Backup link of the active partition
- B. Select the active partition, select the Backup option from the Edit menu
- C. Create a new snapshot, download the snapshot to the deployment professional's workstation, install the fixpack.
- D. Install the fixpack. The installation will copy the configuration and install the fixpack to the inactive partition, set it active and restart.

Correct Answer: C

QUESTION 4

A deployment professional has created an Access Control Policy to protect sensitive business information, but is not obtaining the desired result.

▼ Rules (4) ? Precedence: First ▼ ? Attributes: Optional ▼

1. If **riskScore < 40**
Then Permit
2. If **riskScore < 40**
userConsent is present and
userConsent = "true"
Then Permit with Obligation **Register Device**
3. If **riskScore < 40**
userConsent is missing
Then Permit with Authentication **Consent Register Device**
4. Deny

Add Rule ▼

Considering the rule precedence, which decision is returned for a user with a risk score of 40 and an ipAddress not considered malware?

- A. Deny
- B. Permit
- C. Deny after Authentication One-Time-Password
- D. Permit after Authentication One-Time-Password

Correct Answer: A

QUESTION 5

A customer has configured the IBM Security Access Manager V9.0 appliance authentication to an external LDAP server. The customer wants to allow support staff with LDAP accounts that are members of the HelpDesk group to view appliance and audit logs.

Where should the deployment professional configure a new role and map it to the HelpDesk LDAP group for the support staff?

- A. Manage System Settings-> Management Delegation
- B. Manage System Settings-> Administrator Settings

C. Manage System Settings-> Management Authorization

D. Manage System Settings-> Management Authentication

Correct Answer: B
