QUESTION 1

Which business process diagram component will determine if incoming paths are active so that the process flow does not wait for paths that will never complete?

- A. Subprocess
- B. Decision Service
- C. Parallel Gateway
- D. Inclusive Gateway

Correct Answer: D

QUESTION 2

A BPM application developer needs to create a business process that will contain several human services. After development begins, the developer learns that some of the task participants could be defined by the internal IBM BPM security provider, while others could be defined in an external LDAP server.

How should the developer proceed in order to allow this mix of users to participate in the process?

The BPM application developer should:

- A. use only the external LDAP provider and recreate the internal users in the external LDAP server.
- B. use only the internal IBM BPM security provider and recreate the external LDAP users so that they are defined by the internal IBM BPM security provider.
- C. use either the internal IBM BPM security provider or the external LDAP provider, but not both. All users must exist in either the internal IBM BPM security provider or the external LDAP server.
- D. use the internal IBM BPM security provider in conjunction with the external LDAP provider. Create an IBM BPM security group and add the external LDAP users using the Process Admin Console.

Correct Answer: D

QUESTION 3

A BPM application developer has built an integration service that executes SQL calls. Within this service, the BPM application developer makes use of the "SQL Execute Statement" service found within the TWSYS toolkit. Review the snapshot of the data mapping for this service. The BPM application developer wants to manage the "dataSourceName" value at runtime, instead of hardcoding the value "jdbc/BPMTEST".

Which features of IBM Business Process Manager V8.0 will allow the BPM application developer to do this? (Choose two)

- A. environment variables
- B. auto tracked variables
- C. localization resources
- D. shared process variables
- E. exposed process variables

Correct Answer: AE

QUESTION 4

A BPM application developer has developed multiple business processes which use a business object named "Order". It is required that multiple processes see and update the business object simultaneously. How can the BPM application developer accomplish the requirement?

- A. Keep the default settings and allow the "Order" business object to be passed by value.
- B. Keep the default settings and allow the "Order" business object to be passed by reference.
- C. Select the business object "Order" and enable the "Shared Object" in the Behavior settings.
- D. Create the attributes within the "Order" business object as attributes within an exposed process variable.

Correct Answer: C

QUESTION 5

A BPM application developer has been called into a training session with a group of developers who are new to IBM Business Process Manager V8.0. The BPM application developer needs to describe the process of building an Ajax service to help the new developers complete their assignment.

What statement will the BPM application developer make regarding the process of building an Ajax service in the training session? Creating an Ajax service is:

- A. similar to the process for creating other services, except they are created in the library area where User Interface library items are stored.
- B. similar to the process for creating other services and just like other services, they are created in the library area where Implementation library items are stored.
- C. different from the process for creating other services because they are coupled with the human service in which they are used. However, they are created in the library area where Implementation library items are stored.
- D. different from the process for creating other services because they are coupled with the human service in which they are used. This is why they are created in the library area where User Interface library items are stored.

Correct Answer: A
