Following Questions and Answers are all new published by IBM Official Exam Center

QUESTION 1

A system administrator has configured a cluster containing 40 servers. The cluster members all belong to one core group. While examining the log files, the administrator notices that the core group coordinator is consuming abnormally high amounts of memory and CPU resources.

How can the system administrator reduce the memory and CPU resource usage of the core group coordinator?

A. Configure a core group bridge.

B. Configure a second active coordinator

C. Decrease the memory on the machine.

D. Move the coordinator to another machine.

Correct Answer: A

QUESTION 2

A web application has a configured session timeout of eight hours and a default LTPA token timeout of two hours. After every two hours, the users have to log in again from their HTTP browser. The system administrator is required to make

configuration changes so users only have to log in once, while keeping the above-mentioned timeouts the same.

The authentication mechanism available is Kerberos.

How should the administrator do this?

A. Configure the SIP digest authentication.

B. Configure the SPNEGO Web or SPNEGO TAI.

C. Enable Session Management Security Integration.

D. Ensure Web Inbound security attribute propagation is enabled.

Correct Answer: C

QUESTION 3

While coordinating a flexible management topology, the job manager can send commands to which components?

A. Application server and name server.

B. On demand router and load balancer.

C. Deployment manager and admin agent.

D. Node agent and web administration server.

Correct Answer: C

QUESTION 4

A system administrator has deployed web applications to a clustered environment where database session persistence is configured. The administrator needs to improve the response time and the throughput. How can the system administrator do this?

A. Disable server affinity.

B. Configure dynamic caching.

C. Configure a load balancer to spread work between existing web servers.

D. Tune the database session persistence to optimize for failover.

Correct Answer: B

QUESTION 5

A system administrator is required to create a star topology for multi-cell performance management for three WebSphere Application Server cells. How should the administrator configure the Application Placement Controller (APC) in a star topology?

Configure the cell custom property Center Cell to:

A. false in all three WebSphere Application Server cells.

B. false in one WebSphere Application Server cell True in the other two WebSphere Application Server cells.

C. true in all three WebSphere Application Server cells.

D. true in one WebSphere Application Server cell false in the other two WebSphere Application Server cells.

Correct Answer: D
