## QUESTION 1

A system administrator has enabled the HPEL mode on an application server, but has disabled the HPEL text log to improve performance.

How can the administrator view only the messages that were streamed to System.out and System.err by a single server thread?

- A. Use a text editor to open a log file in the server\\'s logdata directory, and search for the thread ID.
- B. Use the Log Analyzer to import the SystemOut.log file for the server and search on the thread ID.
- C. Use the Integration Solutions Console (ISC) Log Viewer to select a thread and then click the "Show Only Selected Threads" button.
- D. Use the Integration Solutions Console (ISC) Log Viewer\\'s filtering section to search for the string "Thread ID\*" in the message content field.

Correct Answer: C

---

## QUESTION 2

A WebSphere Application Server has been set up to receive requests from an IBM HTTP Server (IHS). A system administrator has been asked to examine the environment for problems (if any) and has been given several log files to check.

This is an excerpt from the IHS\\'s access.log:

```
- - [26/Jan/2012:14:17:19 +0800] "GET /Login.jsp HTTP/1.1" 500 620
```

What should the administrator do next?

- A. No action needed. The access.log does not indicate any problems.
- B. Determine what could be causing the HTTP status code 620.
- C. Verify Login.jsp can be found in the document root directory of the IHS.
- D. Check the server\\'s SystemOut.log file to see what errors occurred around the same time.

Correct Answer: D

---

## QUESTION 3

A system administrator needs to modify the Java 2 security permissions for applications running on a server. How should the administrator perform this task?

- A. Use the PolicyTool.
- B. Use the iKeyman tool.
- C. Edit the was.policy file.
- D. Edit the security.xml file.

Correct Answer: A

---

#### QUESTION 4

Customers are complaining that a particular web site is "hanging". To troubleshoot the problem, a system administrator decides to trigger several thread dumps to determine which threads might be hung. How can the administrator trigger the thread dumps?

- A. Use wsadmin to execute the dumpThreads command for the application server.
- B. Run the collector command line script with the -Summary option set to "yes".
- C. Set the node agent's custom property "com.ibm.websphere.threadmonitor.dump.java" to true.
- D. From the Integrated Solutions Console (ISC), click the System dump button for the application server.

Correct Answer: A

---

#### QUESTION 5

A system administrator needs to create a new standalone WebSphere application server profile on . All previous WebSphere installations have been on . What should the administrator do to prevent a port conflict with this new server?

- A. Execute the pmt script from a remote machine.
- B. Execute the Profile Management Tool from
- C. Edit the server.xml file on to change ports.
- D. Look for running processes on using port 9080

Correct Answer: B

---
