QUESTION 1

A system administrator decides to use the advice from the Performance and Diagnostic Advisor to identify the optimum connection pool settings for data sources. In a cell, the data source db2datasource is defined under node scope and used by two servers from that node. The administrator receives two different sets of advice for db2datasource.

How should the administrator configure the data sources before reusing the Performance and Diagnostic Advisor?

A. Create a data source of the same name under cell scope.

B. Create a data source of the same name under server scope for each server.

C. Increase the minimum connection pool size for the data source.

D. Decrease the maximum connection pool size for the data source.

Correct Answer: B

QUESTION 2

After installing an enhanced EAR in a WebSphere Application Server environment, a system administrator with Configurator privileges is able to see a JDBC provider and a data source in the Integrated Solution Console (ISC) but is not able to delete these resources.

How can the administrator resolve this issue?

A. Use the AdminTask object to delete the resources.

B. Stop all application server instances and then delete the resources.

C. Ask another administrator with iscadmin privilege to delete the resource.

D. Edit the EAR to remove the application scoped resources and reinstall the application.

Correct Answer: A

The JDBCProviderManagement command group for the AdminTask object includes the following commands:

QUESTION 3

Which of the following comprises an initial Liberty profile server process?

A. A single JVM, the Liberty kernel, and feature manager.

B. A single JVM, and OSGI framework and an object request broker.

C. an OSGI framework, a web container and an EJB container.

D. AN administrative agent, the Liberty kernel and shared libraries.

Correct Answer: A

The server process comprises a single JVM, the Liberty kernel, and any number of optional features.

QUESTION 4

A system administrator completed a WebSphere Application Server installation by using the Installation Manager. During installation, all defaults were selected for the installation root directories and the shared resources directory. Over time, the administrator has updated the installation with various interim fixes and fix packs. The administrator notices that the shared resources directory is very large in size and grows larger each time the Installation Manager is run.

How can the administrator decrease the size and remove some of the content from the shared resources directory?

A. Manually delete content from the directory.

B. During an update, create a new shared resources directory.

C. Clear the Delete Saved Files option for the Installation Manager.

D. Set the preserveDownloadedArtifacts preference to false.

Correct Answer: D

Because product payloads are cached in this directory, space requirements can grow very large over the lifetime of the product, as service updates are applied. The WebSphere Application Server product image is large, so if this content is permitted to accumulate, then this directory will grow to be many gigabytes in size over the course of multiple fix pack applications. You should never manually delete the content in this folder. Instead, during any installation or maintenance operation, you can specify the following preference to remove some of the content in this folder: -preferences com.ibm.cic.common.core.preferences.preserveDownloadedArtifacts=false

QUESTION 5

A system administrator runs a Jython script that creates and configures several servers and realize that the script fails before completing. Although many tasks succeeded, they are rolled back when the script fails.

Before running the script again, what can the administrator add to the script after each task so the completed tasks are committed even if other tasks fail?

A. AdminApp.update()

B. AdminConfig.save()

C. AdminControl.invoke(server, `sync\\')

D. AdminTask.backupJobManager(`server\\')

Correct Answer: B

AdminConfig.save()to save changes after script execution.
