## QUESTION 1

To write a Jython script to stop a running application server, an administrator should use which administrative object?

- A. AdminApp
- B. AdminTask
- C. AdminConfig
- D. AdminControl

Correct Answer: D

You can use the wsadmin tool to stop applications.

There are two ways to complete this task. Firstly, you can use the AdminControl object to stop the application. Alternatively, you can use the scripts in the AdminApplication script library to start, stop, and administer your application configurations.

## QUESTION 2

Which statement is true about a request made from a browser for a jsp running in an application server?

- A. The HTTP server plug-in loaded with the embedded HTTP server within the application server forwards the request to the application server.
- B. The plug-in configuration file loaded with the embedded HTTP server within the application server forwards the request to the application server.
- C. The HTTP server plug-in loaded with the HTTP server forwards the request to the embedded HTTP server within the application server. The embedded server forwards the request into the web container.
- D. The plug-in configuration file loaded with the HTTP server forwards the request to the embedded HTTP server within the application server. The embedded server forwards the request into the web container.

Correct Answer: A

When IBM HTTP Server receives a request for a JSP file, it passes the request to WebSphere Application Server - Express's servlet engine, which calls the JSP processor. The JSP processor is an internal servlet which converts a JSP file into Java source code and compiles it. The servlet that implements the JSP processor is `org.apache.jasper.runtime.JspServlet`.

## QUESTION 3

What information must the system administrator have to successfully tune a connection pool?

- A. The requests per second that occur during a peak.
- B. The MaxConnections and WaitingCount values.
- C. The number of concurrent requests waiting for a connection.
- D. How long the database takes to respond to SELECT operations only.

Correct Answer: D

## QUESTION 4

When setting up high availability settings for the web server, at what level should an administrator configure the custom properties?

- A. cell
- B. node
- C. server
- D. nodeagent

Correct Answer: C

## QUESTION 5

What are two differences between dynamic clusters and static clusters? (Choose two.)

- A. Dynamic Workload Management is enabled by default in dynamic clusters.
- B. The application placement controller can start and stop a dynamic cluster that is in automatic mode only.
- C. Using the autonomic request flow manager (ARFM) in manual mode will not affect dynamic cluster mode.
- D. Using static clusters in an Intelligent Management enabled environment will acquire some of a dynamic cluster features.
- E. When creating a static cluster using an application server template, any changes made to the template after creating the instances do not change the instances.

Correct Answer: AE

A: The dynamic workload manager is enabled by default and assigns weights to the application server instances.

E: When you define a static cluster, you can select an application server template on which to base all the application server instances that you create. However, any changes that you make to the template after creating the instances do

not change the instances.
