QUESTION 1

An administrator upgrades the IBM DB2 JDBC driver. The test connection operation fails. On checking the System.Out log the administrator finds that the JVM is still using the old JDBC driver.

What could be the possible reason for the failure?

- A. No driver JARs exist.
- B. The driver upgrade failed.
- C. There are multiple drivers in the provider classpath.
- D. DB2UNIVERSAL_JDBC_DRIVER_PATH was NULL.

Correct Answer: B

QUESTION 2

An administrator configured Web authentication for a Web module deployed in an application server to protect the URL. After this configuration, application users could not load images that are protected on the web page.

In addition to configuring `com.ibm.wsspi.security.web.webAuthReq` as a JVM custom property, which two property values can an administrator set to resolve the problem? (Choose two.)

- A. lazy
- B. eager
- C. always
- D. transient
- E. persisting

Correct Answer: DE

QUESTION 3

Where does the test connection operation occur for a data source configure at cluster scope?

- A. Deployment manager process
- B. Each server process in the cluster
- C. Node agent for each node that contains a cluster member
- D. Node agent for one of the nodes that contain a cluster member

Correct Answer: C

QUESTION 4

A system administrator has downloaded IBM WebSphere Application Server binaries and created a local IBM Installation Manager repository.

What can the system administrator do to ensure only this local Installation Manager repository is used during installation of the product?

- A. Create a preference for the public repository.
- B. Use the Packaging Utility to create the repository.
- C. Make sure the metadata for the repository includes the value "local".
- D. Clear the Search service repositories during installation and update option.

Correct Answer: B

QUESTION 5

Which two methods are used for communicating session linkages between the client and the server? (Choose two.)

- A. Cookies
- B. LTPA Token
- C. Rest Services
- D. URL Rewriting
- E. HTTP Response codes

Correct Answer: CE

Representational State Transfer (REST) is a lightweight framework for designing applications that use HTTP to make calls. REST uses HTTP to perform the Create, Read, Update, and Delete (CRUD) operations between client and server.

Applications interact with the services by using HTTP, POST, PUT, GET, and DELETE operations.
