QUESTION 1

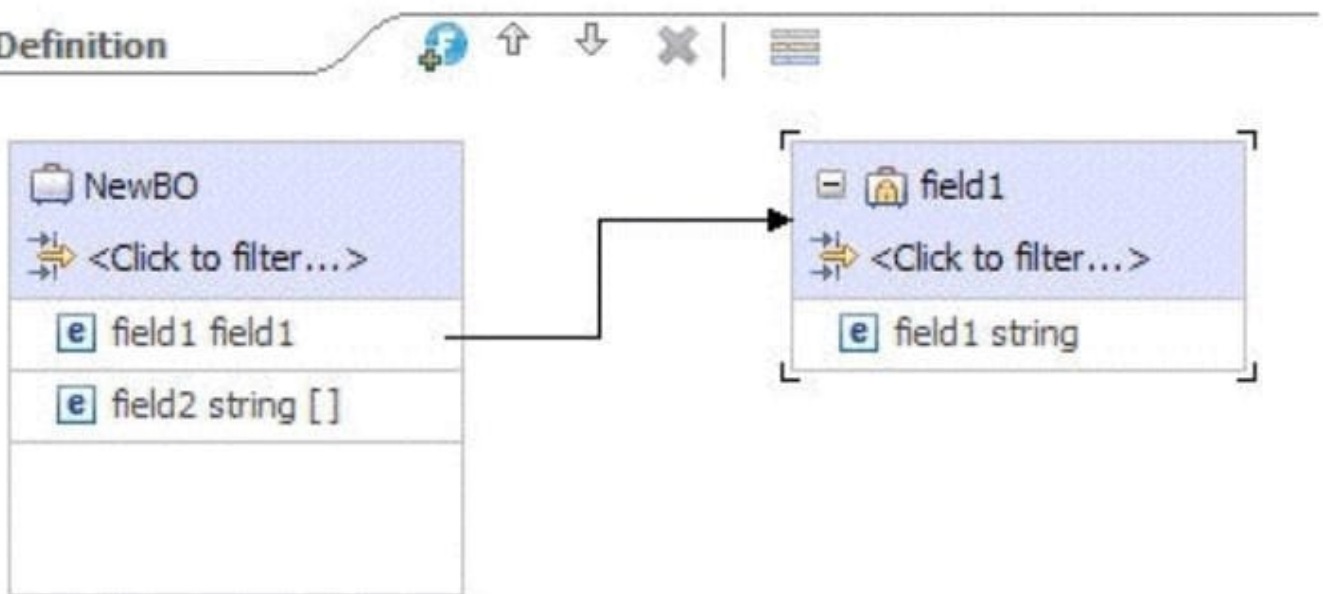

An integration developer is working with a set of business objects using the business object editor and notices a lock mark associated with a business object.

What does the lock mark associated with the field business object in the Exhibit indicate?

Business object

Configuration

Definition

- A. The field1 business object is private.
- B. The field1 business object is abstract.
- C. The field1 business object has not been defined.
- D. The field1 business object is invalid because the object name conflicts with the attribute name.

Correct Answer: A

QUESTION 2

An integration developer is writing a new mediation flow and making use of the custom mediation primitive.

Within the Java snippet code the integration developer uses the List Java interface.

On building the project, it fails and an entry in the Problems Tab shows: "List cannot be resolved to a type"

How can this issue be resolved?

- A. Select the module and File->Import->JAR file and import the utils jar file.
- B. In the Java imports tab of the Custom Mediation primitive, insert "import Java.util.List".
- C. In the User properties tab of the Custom Mediation primitive, click add and then select Java.util.List.
- D. In the Details tab of the Custom Mediation primitive, add "import java.util.List" at the top of the Java code.

Correct Answer: C

QUESTION 3

An integration development team is preparing a mediation flow for a test team. The flow contains several primitives (Event Emitter, Message Logger, and Trace) that will only be used for trace and logging purposes. It is known that the inclusion of these additional Tracing primitives will have an adverse effect on performance, so the test team wants the ability to test the meditation flow with and without trace being generated, and with the minimal amount of changes needed to the test setup. How should the integration development team BEST implement the test team's requirements?

- A. Promote the Enabled property of each primitive.
- B. Rebuild the mediation flow without the logging and tracing primitives.
- C. Set the Enabled property of each primitive to unchecked and redeploy.
- D. Set the Transaction property of each primitive to run in their own transaction.

Correct Answer: A

QUESTION 4

An integration developer is tasked to automate the testing of component test projects, test suites, and test cases. Which of the following is the most recommended approach for automated testing?

- A. Use Ant scripts
- B. Use Jython scripts
- C. Use Python scripts
- D. Use serviceDeploy command

Correct Answer: A

QUESTION 5

An integration developer is creating one or more test suites using WebSphere Integration Developer. What must be created before the developer can define the test suites?

- A. A test case

- B. A test library project
- C. A unit test project
- D. A component test project

Correct Answer: D
