QUESTION 1

What is the minimum requirement for a valid analytic view?

A. One fact table and one attribute view

B. One attribute view

C. One fact table and two attribute views

D. One fact table

Correct Answer: D

QUESTION 2

What is the purpose of the savepoint process in SAP HANA?

A. Save changed data to the persistent storage when a transaction is committed.

B. Save logs to persistent storage when a transaction is committed.

C. Save changed data and logs to the persistent storage on a regular basis.

D. Free-up memory by saving less used data to the persistent storage.

Correct Answer: C

QUESTION 3

A calculation view that joins one fact table with dimension tables performs slowly.

Which of the following can you do to improve performance?

A. Turn the calculation view into an analytic view.

B. Turn the calculation view into a simple calculation view.

C. Load the calculation view into memory.

D. Load the calculation view into the _SYS_BI schema.

Correct Answer: A

QUESTION 4

You have a table of transactional data with different transaction types. You want to create an analytic view for only one
of the transaction types.

How can you ensure that only rows with the required transaction type are displayed in the analytic view?

A. Create an input parameter

B. Create a filter on the table

C. Create a calculated column

D. Create a restricted column

Correct Answer: B

QUESTION 5

Which statement best describes an analytic view as a multidimensional view?

A. Analytic views are composed of one data foundation and one or more attribute views.

B. Analytic views are composed of at least one attribute view joined with more than one data foundation.

C. Analytic views are composed of multiple joined data foundations.

D. Analytic views are composed of at least one attribute view.

Correct Answer: A
