QUESTION 1

When you are planning Data Repository backups, which factor should you consider?

- A. Best practice is to perform backups on a daily basis.
- B. Backups can introduce the risk of a simultaneous failure in Vertica.
- C. The database backup should be viewed as a best practice and not a requirement.
- D. The backup interval depends on the data loss tolerance of the enterprise customer.

Correct Answer: D

QUESTION 2

As the Global Administrator of a CA Performance Management instance that hosts three tenants, you are only able to see two of the five available SNMP profiles. Why are you unable to view all five profiles?

- A. Because in this instance, two profiles are associated with the tenant you are currently administering
- B. Because Global Administrators typically need to refresh the screen before the full set of profiles appear
- C. Because the Global Administrator must change an entry in the SNMP_549.xml file to see all SNMP profiles
- D. Because the tenant administrators must change the permission of the SNMP profiles that they manage to enable the Global Administrator to see them

Correct Answer: A

QUESTION 3

Which benefits does CA Performance Management scalability provide to an organization? (Choose two)

- A. The Vertica database can scale to 32 terabytes and beyond.
- B. Using fewer physical servers means that the administrative burden is lessened.
- C. A three-node database cluster enables you to scale to a maximum of 500,000 managed devices.
- D. A shared Oracle installation means that you can co-locate the CA Performance Management database with other databases.

Correct Answer: AB

QUESTION 4

In which circumstances is it particularly appropriate to use the multi-tenancy features of CA Performance Management? (Choose two)

- A. To administer several customer environments from a single instance of CA Performance Center
- B. To make it easier to configure CA Performance Center and its data sources for multiple languages
- C. To segregate device monitoring in large business units, departments, or regional offices from each other
- D. To have CA Performance Center reconcile the identity of a single managed item that is monitored by multiple data sources into a single item in the inventory

Correct Answer: AC

QUESTION 5

In CA Performance Center, permission groups:

- A. Are always read-only copies of system or custom groups.
- B. Are custom groups that organize managed items for data access purposes.
- C. Are known as context groups until they are assigned to user accounts as permission sets.
- D. Are used to group users who have common access requirements to selected data sources.

Correct Answer: B
