QUESTION 1

When you configure tenant-aware monitoring using service tiers, you can configure change detection functionality. Why might you configure change detection?

A. To define event thresholds

B. To discover new devices in the monitored environment

C. To configure how often the system checks for changes in device components

D. To check collections have been added,changed,or removed from monitoring profiles

Correct Answer: C

QUESTION 2

When you create or edit a monitoring profile, you can use the Change Detection Rate option to set the frequency at which the Data Aggregator checks for changes. When you set the rate of detection, the Automatically Update Metric Families check box is selected by default. What happens if you clear this check box?

A. The Change Detection Rate field will no longer be editable.

B. The automatic updating of metric families will continue unless you also change settings for specific metric families.

C. The Data Aggregator will continue to automatically monitor new components but will no longer retire old components.

D. The Events Display dashboard will need to be monitored and updates will need to be performed manually on the Polled Metric Families page.

Correct Answer: D

QUESTION 3
