QUESTION 1

When managing SSH keys. CPM automatically pushes the Private Key to all systems that use it.

A. TRUE

B. FALSE

Correct Answer: B

A single SSH Key can be used to access multiple target systems. The same "public key" is distributed to each target system where a privileged account can be authenticated using the same SSH Key. https://docs.cyberark.com/Product-Doc/OnlineHelp/PAS/Latest/en/Content/SSHKM/Managing%20SSH%20Keys.htm

QUESTION 2

CyberArk creates exceptions for Data Execution Prevention (DEP) on selected executable files. This is done as part of installing, which of the following components?

A. PSM

B. CPM

C. PVWA

D. AAM Credential Provider (previously known as AIM Credential Provider)

Correct Answer: B

Reference: https://docs.cyberark.com/Product-Doc/OnlineHelp/PAS/Latest/en/Content/PAS%20INST/ Following-Central-Policy-Manager- Installation.htm

QUESTION 3

When accessing the Vault via PVWA, is it possible, is it possible to configure multiple Dual Authentication Methods?

A. Yes, all authentication methods will be configured to use the Vault integrated authentication flow.

B. No, dual authentication methods are not supported.

C. Yes, authentication methods will be configured to use the combination of IIS and Vault integrated authentication flow.

D. Yes, all authentication methods will be configured to use the IIS integrated authentication flow.

Correct Answer: C

QUESTION 4

In a Disaster Recovery (DR) environment, which of the following should NEVER be configured for automatic failover due to the possibility of split-brain phenomenon?

A. Password Vault Web Access (PVWA)

B. PSM

C. CPM

D. PTA

Correct Answer: D

QUESTION 5

Users complain they are unsuccessful attempting to authenticate to the PVWA web site.

After entering their credentials, they receive a "Timeout has expired". You test the URL using multiple browsers and receive the same error. The CyberArk.WebApplication.log shows the "ITACM012S Timeout has expired" log entry.

What is the next troubleshooting step you should take?

A. Run an IISRESET on the PVWA server

B. Check the CyberArk.WebConsole.log for errors

C. Check network firewall rules to ensure the PVWA can communicate to the Vault over tcp_1858

D. Check the health of the Vault Server and ensure all services are running

Correct Answer: C
