QUESTION 1

An administrator has initiated the process of deploying changes from a sandbox to the production environment using the Force.com IDE. What information must be supplied to the IDE during this process? Choose 3

- A. The data of the fields which are being deployed
- B. The environment into which the changes can be deployed
- C. The related change set connection information
- D. The metadata components that need to be deployed
- E. The username and password of the destination environment

Correct Answer: BDE

QUESTION 2

An admin create a custom field on the sandbox, how can an admin deploy it to Production including the settings of the field level Security?

- A. Check the checkbox to include field level security settings
- B. Check the checkbox saying Profile Settings For Included Components
- C. Not possible using Changeset
- D. Click on Add Dependency button

Correct Answer: B

QUESTION 3

An administrator would like to know which delegated administrators are actively customizing their organization. Where can the administrator find this information?

- A. Delegated administrator log
- B. Setup audit trail
- C. Login history
- D. Debug log

Correct Answer: B

QUESTION 4

Universal Containers is implementing a new lead status process and wants to be able to do the following:

Track leads through five different status values.

Run reports showing the duration a lead spends in each status.

Run full Lifetime reports of a lead from creation to conversion.

Prevent leads from skipping a lead status.

How can these requirements be met?

- A. Use field history tracking on the lead status field to track the duration of each status. Use validation rules to prevent status skipping.
- B. Use an Apex trigger to populate custom date fields for each status, and use custom formula fields for calculating duration of each status.
- C. Use custom date fields and workflow rules for each status, and use custom formula fields for calculating duration of a status. Use validation rules to prevent status skipping.
- D. Use lead history reporting to track changes in the lead status field, and use custom reporting fields to calculate status duration. Use validation rules to prevent status skipping.

Correct Answer: C

QUESTION 5

Which statement is true about change sets? Choose 3

- A. There is a feature that allows the user to validate a change set before deploying it
- B. When custom fields are added to change set, field-level security is automatically included
- C. When a change set is deployed to production, all Apex tests will automatically be run
- D. When a component is added to a change set, as dependent components will get added
- E. To use change sets, at least one inbound and one outbound connection must exist

Correct Answer: ACE
